Woocommerce Rental & Bookings

RnB - WooCommerce Rental & Booking is a user friendly woocommerce booking plugin built as a woocommerce extension. This powerful woocommerce plugin allows you to sell your time or date based bookings. It creates a new product type to your WooCommerce site. Perfect for those wanting to offer rental, booking, or real state agencies or services.

If you need any help contact thorough our support forum.

BUY NOW/LIVE DEMO

Warning:

If you are a new user of our plugin please follow this documentation.

If you are already an existing user of our plugin, please read the below carefully before updating and using this version of our plugin

- **New inventory management system has been added from this version onwards**
- **Hourly booking with hourly calendar blocking has been added from this version**
- **Data structure has been changed.**
- **If you already have an order from 10th of this month to 12th of this month, it will not block the calendar once you update the plugin. New orders will block the calendar.**
- **If you want to use the latest version of our plugin, then you will need to create the inventory with pricing and features attributes, pick up location etc. after updating the plugin.**

If you do not wish to update and want to use our legacy version then please follow the below documentation.

https://legacy.gitbook.com/book/redq/woocommerce-rental-and-booking/details

Plugin installation

After download the full package from CodeCanyon, you will have `woocommerce rental and bookings.zip` file inside your main package. You can install it from WordPress back-end or manually.

install from WordPress back-end:

```
1. Go to wordpress Dashboard-&gt;plugins-&gt;add new.

2. From here click upload plugins button, then you will find the plugin upload window.

3. Upload woocommerce rental and bookings.zip then click install now button.

4. After successfully install the plugin then active it.
```

Inventory Management

Pricing Configuration

```
1. General Pricing
2. Daily Pricing
3. Monthly Pricing (seasonal pricing)
4. Days Range Pricing
5. Hourly Pricing
```

Payable Resources: Adding unlimited payable resources (One time or Per day) basis.

Payable Person: Adding unlimited payable person (One time or Per day) basis.

Car Availability: Day basis car availability/unavailability configuration,+

Date Blocking: Admin can choose if he want to block the booking date or dates or not,

Pickup Location Added: You can add unlimited pickup locations.

Return Location Added: You can add unlimited return locations.

Choose Date Format:

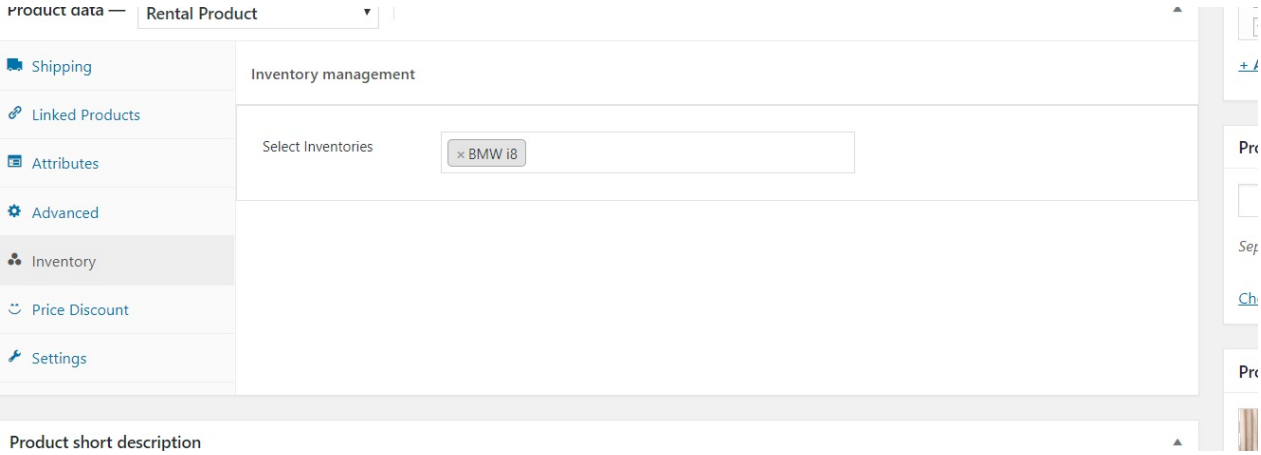
```
1. European Date Format (d/m/y)
2. North American Date format (m/d/y)
3. others countries date format (y/d/m)
```

Proudct Create

To create a product first go to Dashboard->Product->add new . Then from `product data` drop-down select `rental product` as product.

However it is recommended that you create the inventory of the product first and then you attach the inventory with the product.

For example you have a "BMW car". So we suggest that you create the inventory of this product first(inventory creation is explained later) and then attach the inventory with the product while creating the product.



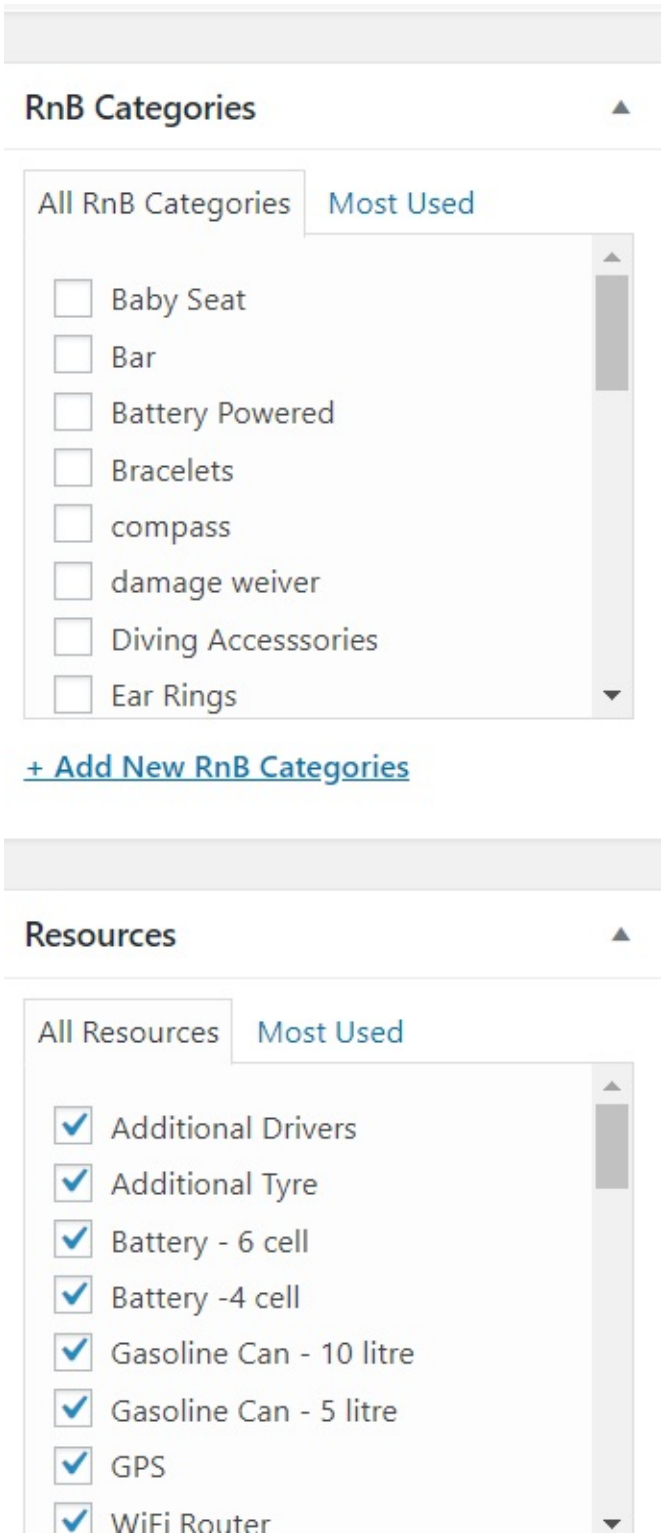
Inventory Management

Inventory is the most wanted feature and available now from v2.0.0 . Now if you have 5 same products, you don't need to create 5 individual products for them. You just need to create 1 product from inventory tab you need to configure these 5 same items.

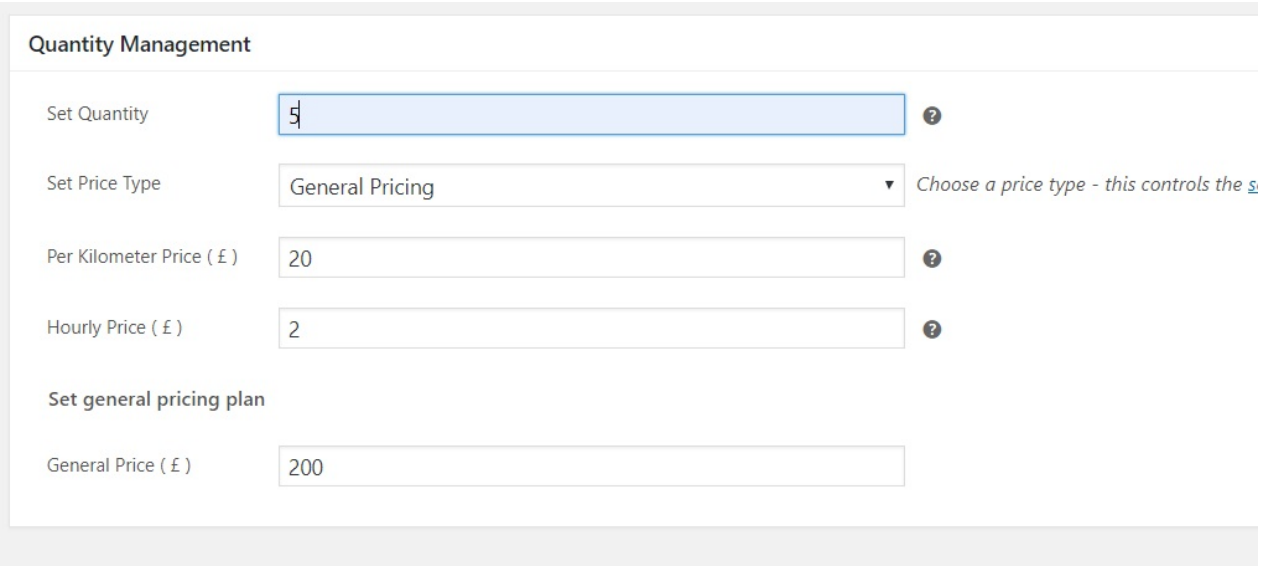
Now every payable or non-payable attributes such as `pickup location` , `drop-off locations` , `resources` , `person` , `security deposite` , `attributes` , `features` are controlled with this inventory tab.

You must need to create inventory first and then attach the inventory with the product.

First you need to create your `pickup location` , `drop-off locations` , `resources` , `person` , `security deposite` , `attributes` , `features` . and then attach these with the inventory.



Then you need to set the pricing of the inventory and the quantity of the inventory.



Quantity Management
Set Quantity
5
Set Price Type

Set general pricing plan
General Price (£)
200

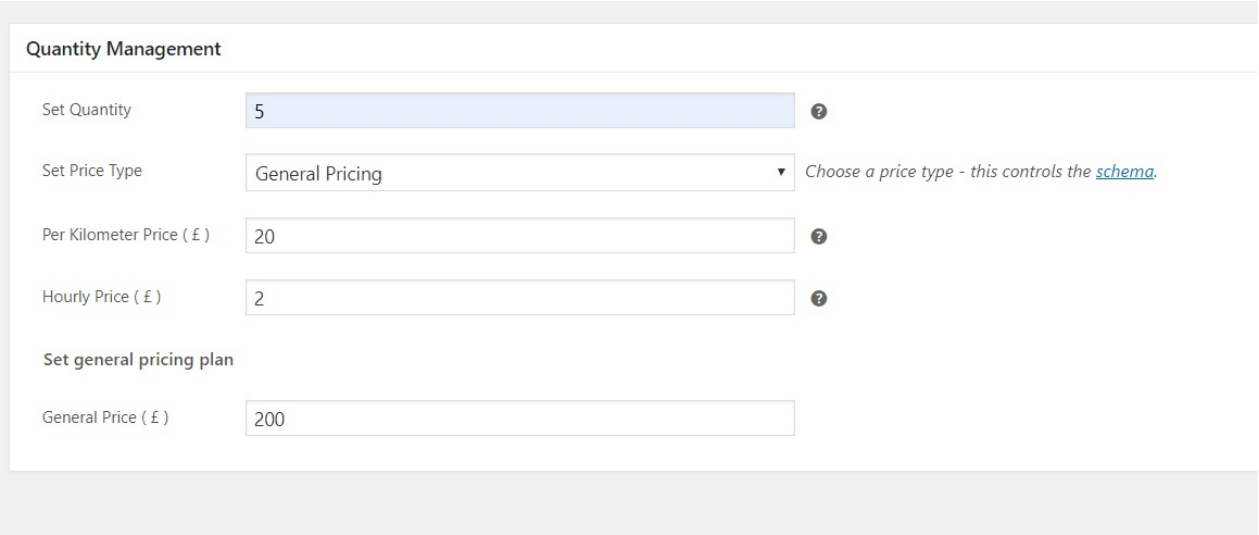
Price Calculation

Our plugins support Six types of pricing plan.

```
1. General pricing plan.
2. Daily pricing plan.
3. Monthly pricing plan.
4. Days ranges pricing plan.
5. Hourly Pricing Plan.
6. Flat Hour Pricing Plan.
```

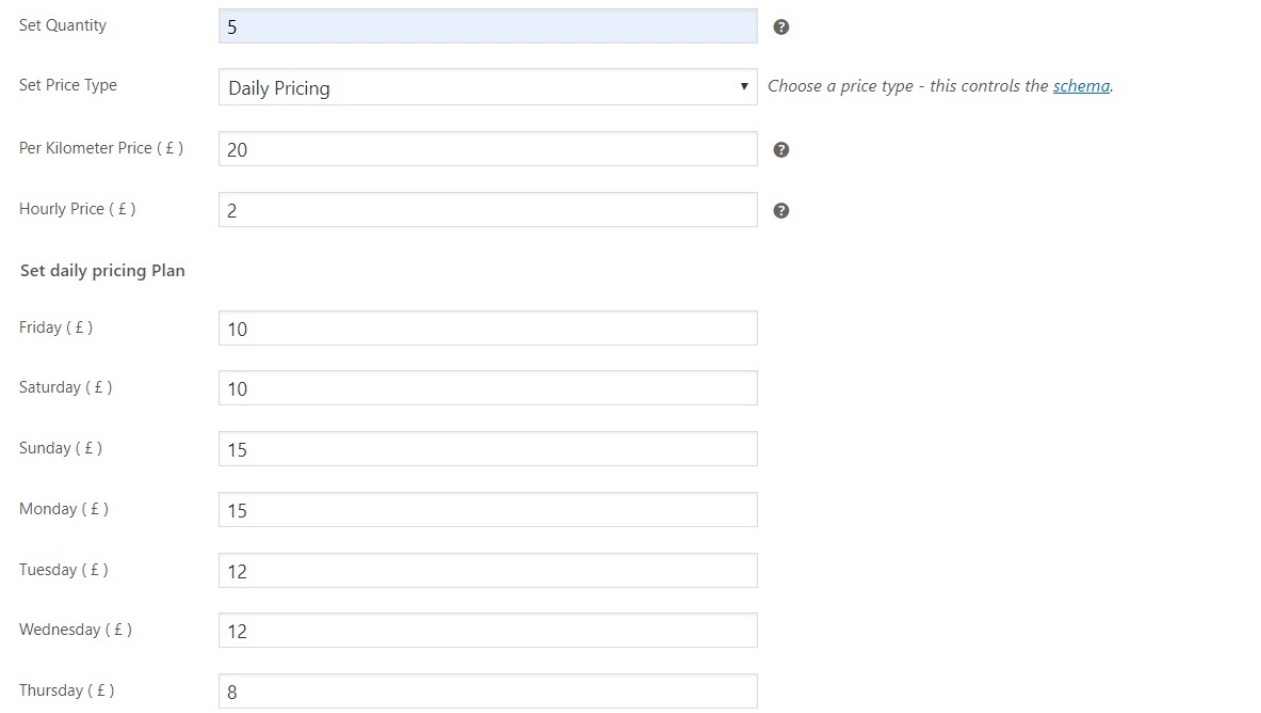
The pricing can be set from the inventory and you can also add the quantity of the inventory.

General Pricing Plan :
When you set general pricing plan for a single product this price will be applied for each days during your booking.



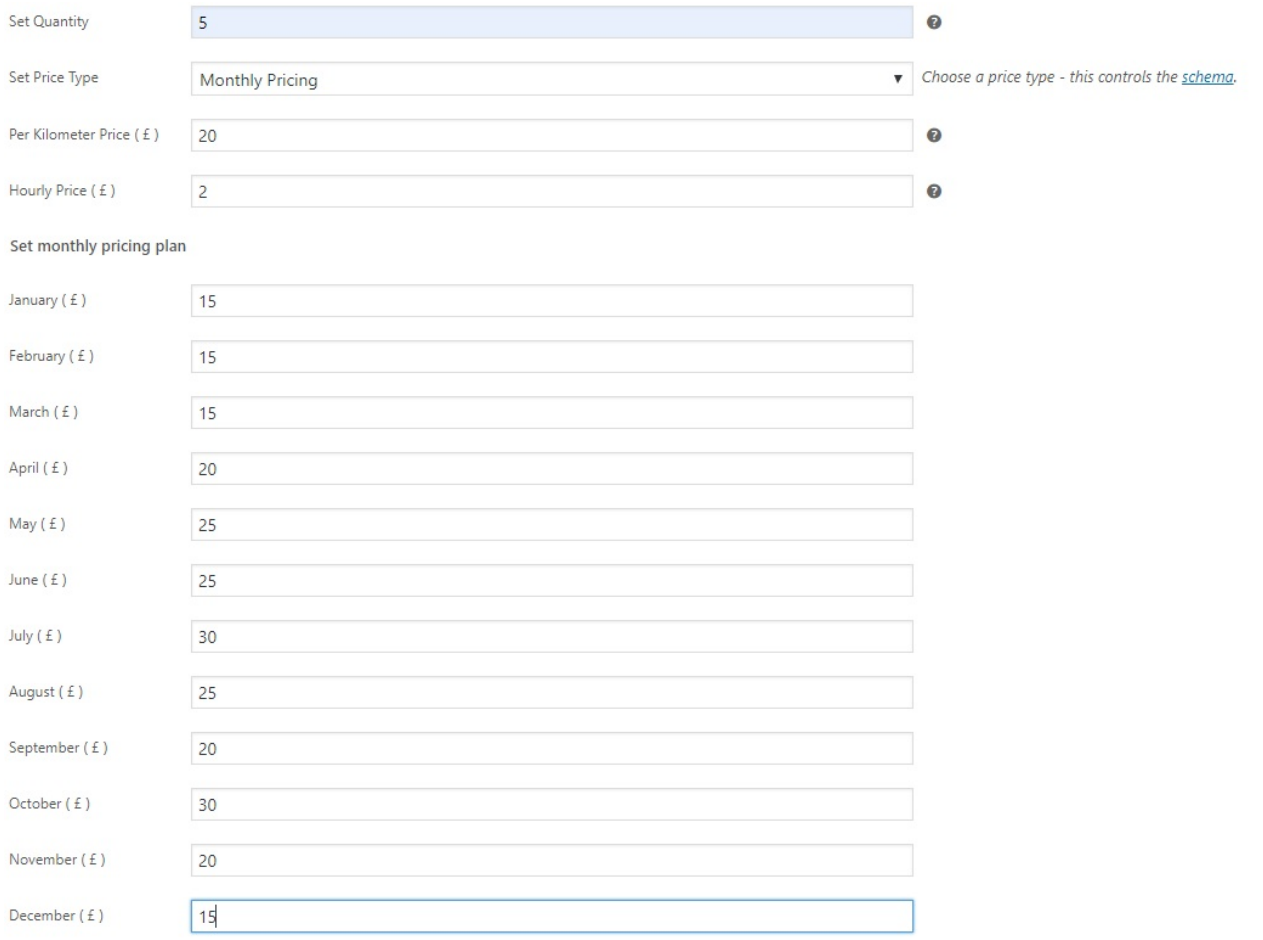
Daily Pricing Plan :

Daily pricing plan allow you to set different price for each days of a week. When you book this product the price will be calculated during depending on the days price.



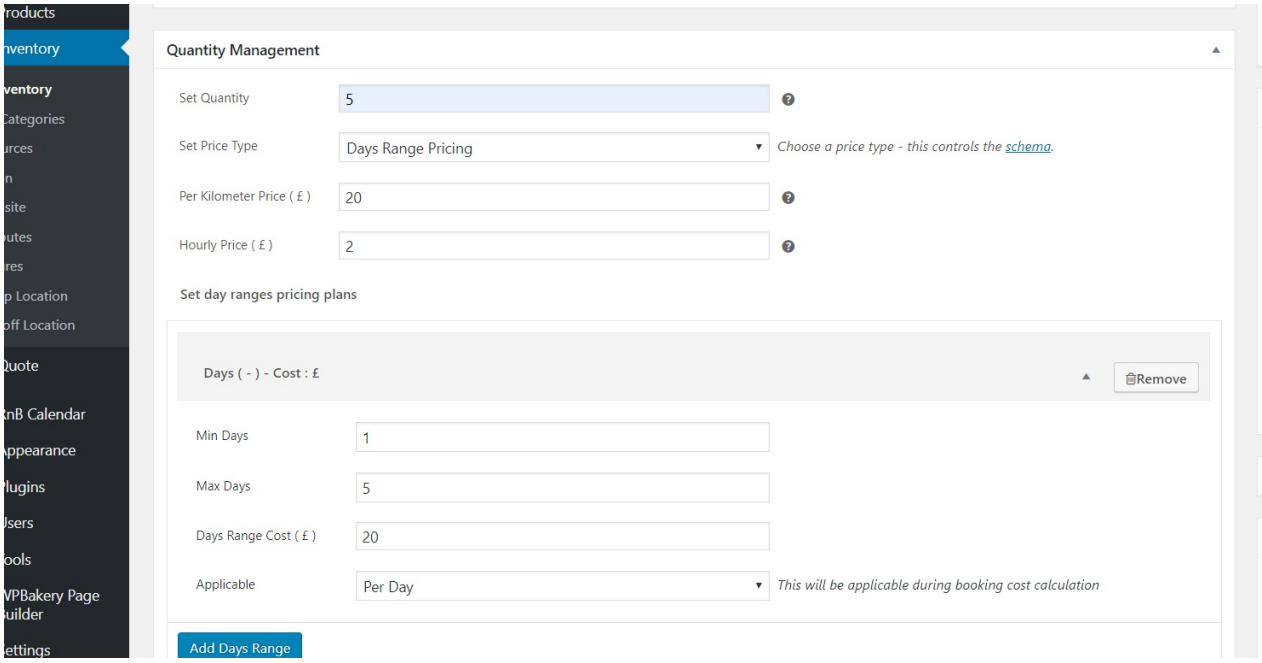
Monthly Pricing Plan :

Monthly pricing plan allow you to set different price for each month of a Year. When you book this product the price will be calculated during depending on the monthly price.



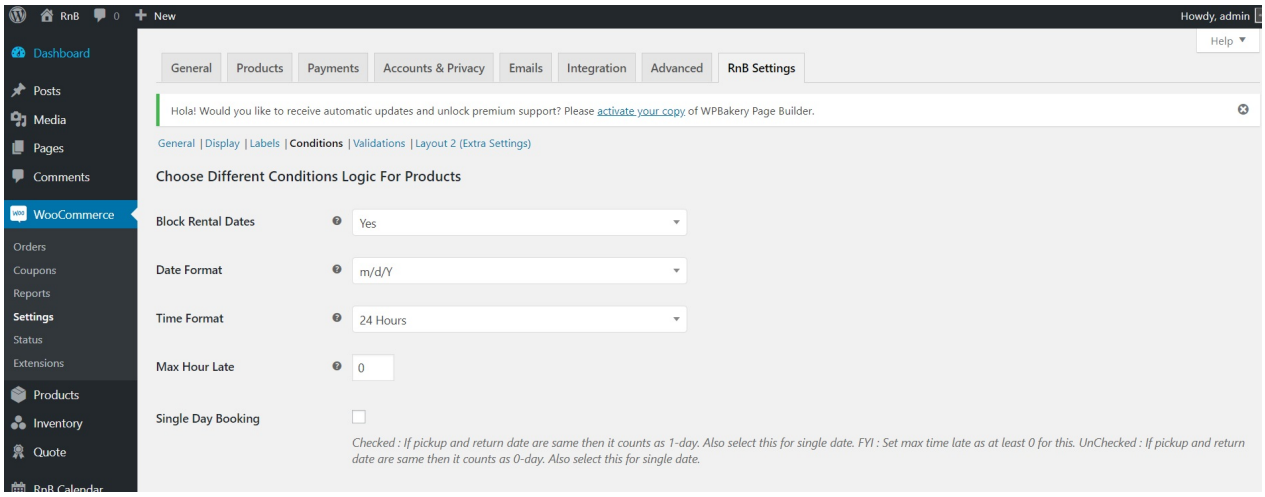
Day-Ranges Pricing Plan

This plugins also allow you to set unlimited day ranges pricing plan like the following images.



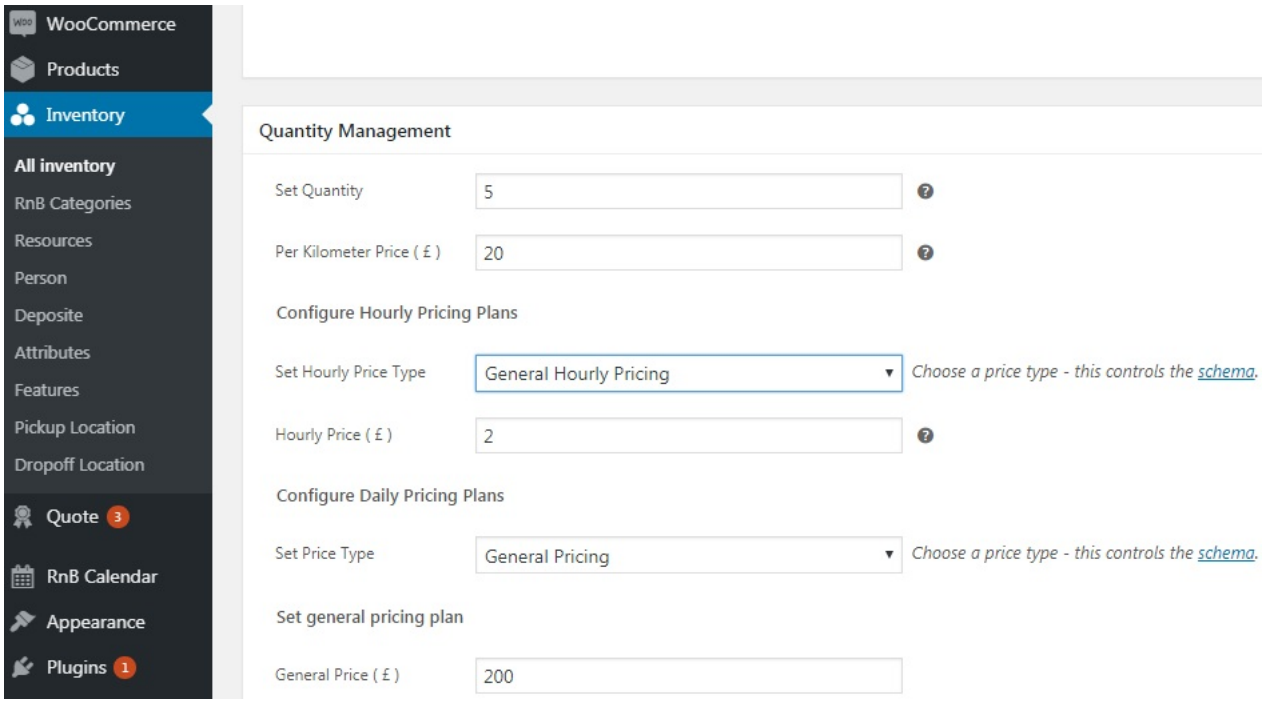
Hourly Pricing Plan :

Our plugins support hourly pricing system if you want to book less than 1 day. However for that from the backend of the WooCommerce settings you need to unselect single day booking (if that is already selected).

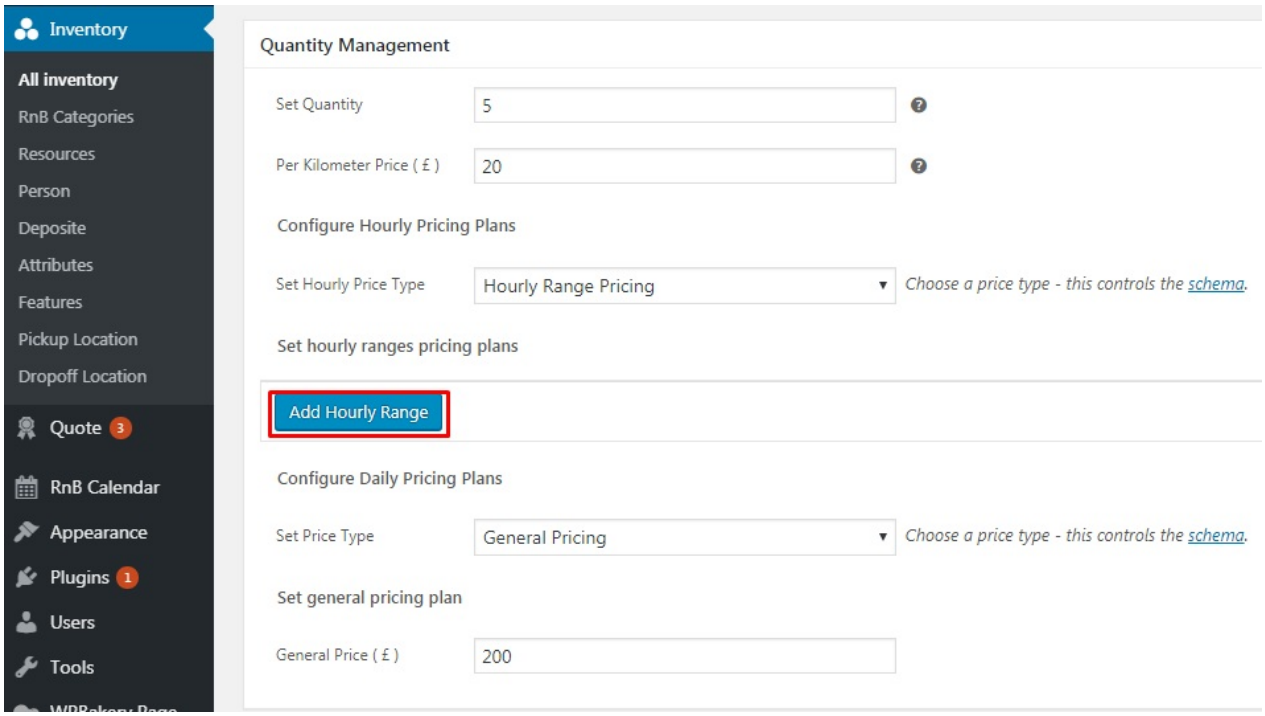


Now our hourly pricing has two types : 1) General Hourly Pricing and, 2) Hourly Range Pricing.

1) General Hourly Pricing



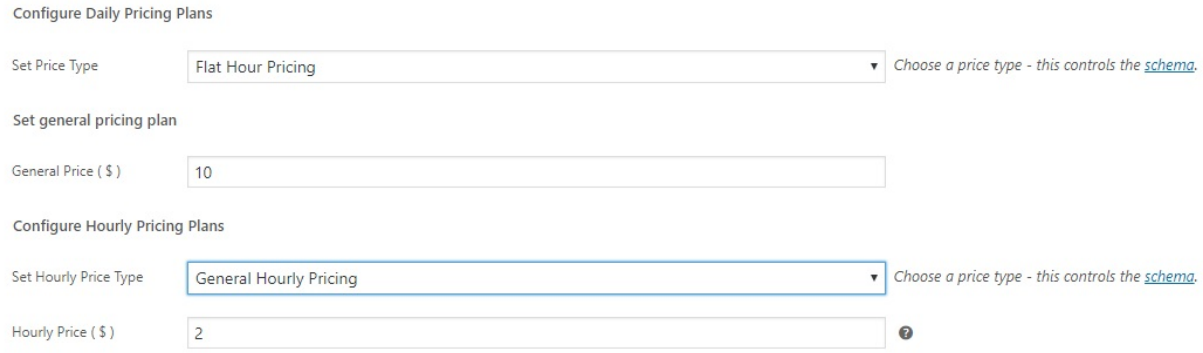
2) Hourly Range Pricing



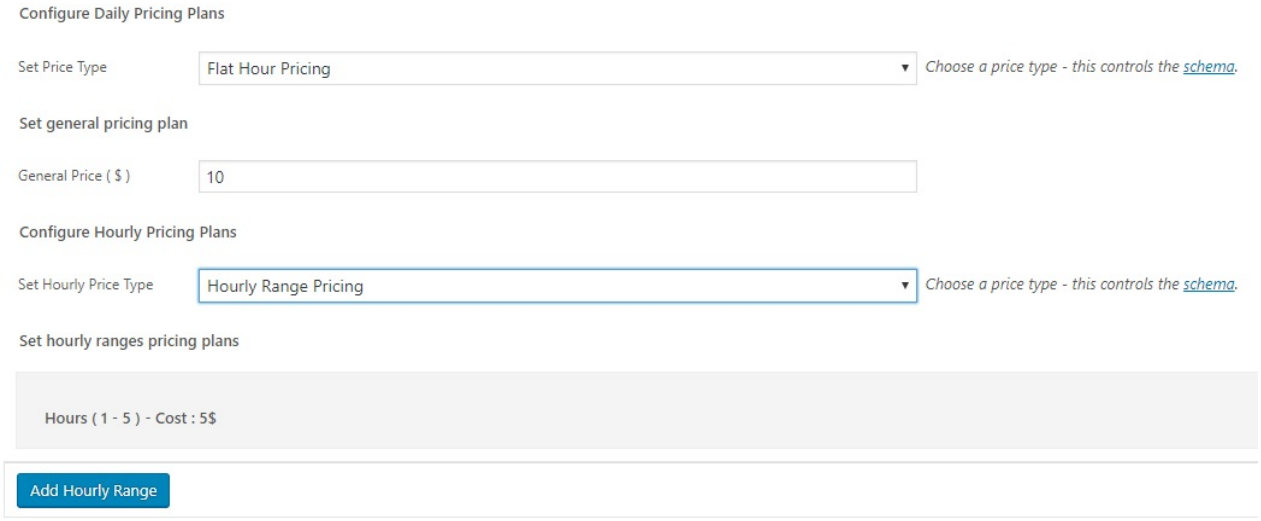
Flat Hour Pricing Plan :

This is the newest pricing plan of our rental plugin. It will work as flat hour rate.

1) Working with General Hourly Pricing

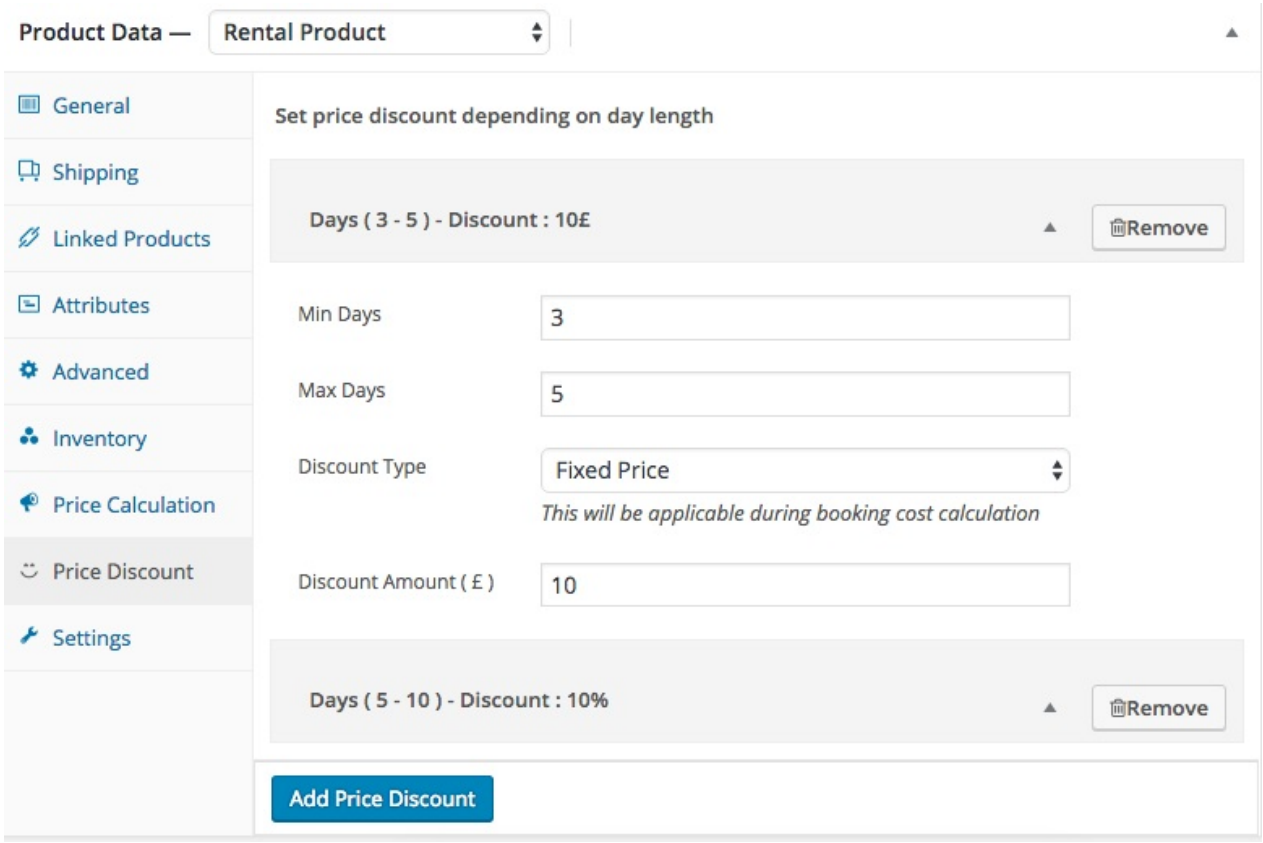


2) Working with Hourly Range Pricing



Price discount

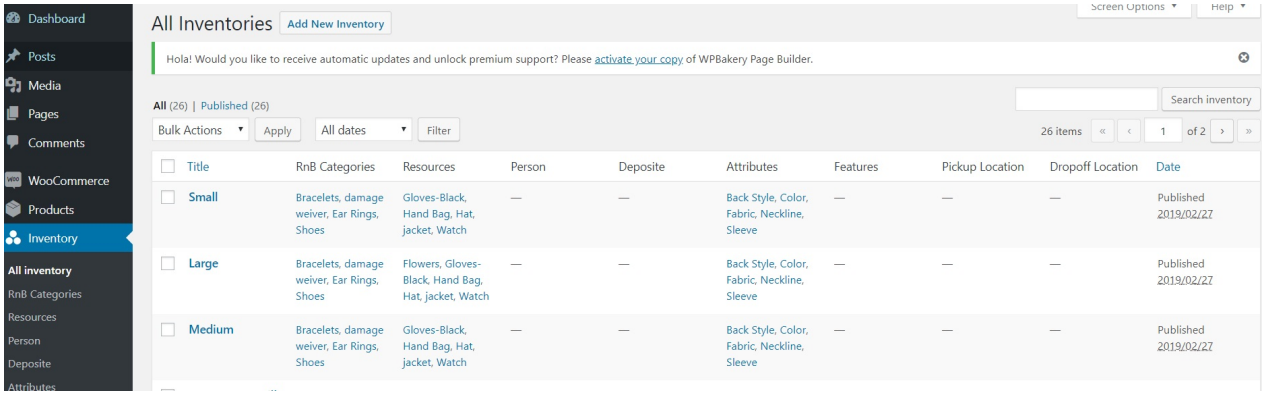
RnB also provides price discount feature depending on booking days. Admin can set unlimited booking day-ranges price discount from product back-end. You can set your discount type as `Fixed price` or `Percentage` basis.



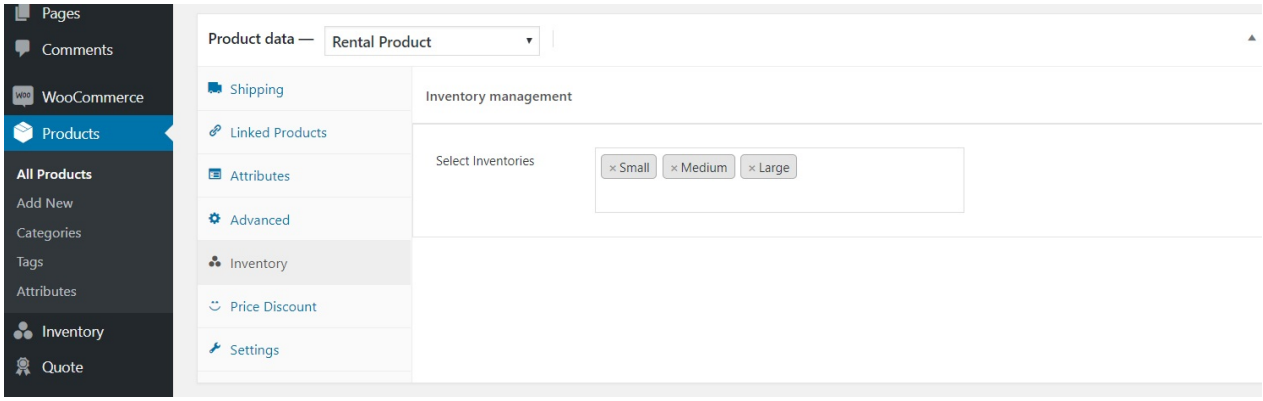
Availability

Now product availability is totally controlled by inventory items.

Suppose you have a product named "polo shirt" which you want to rent out. You have 6 of these with 2 small, 2 medium and 2 large shirts available. So you need to create 3 inventories and you can give them the name "small", "medium" and "large" or any other of your liking. While you create the inventories you add the categories, resources, pick up location, drop off location etc. as per your requirement and publish the inventories. So now you will have inventories like below



Now you need to attach the inventory with the "polo shirt"



This will now mean that you have 6 polo shirts of 3 different sizes and a user can book .

Then availability is controlled with these child posts of the inventory items.

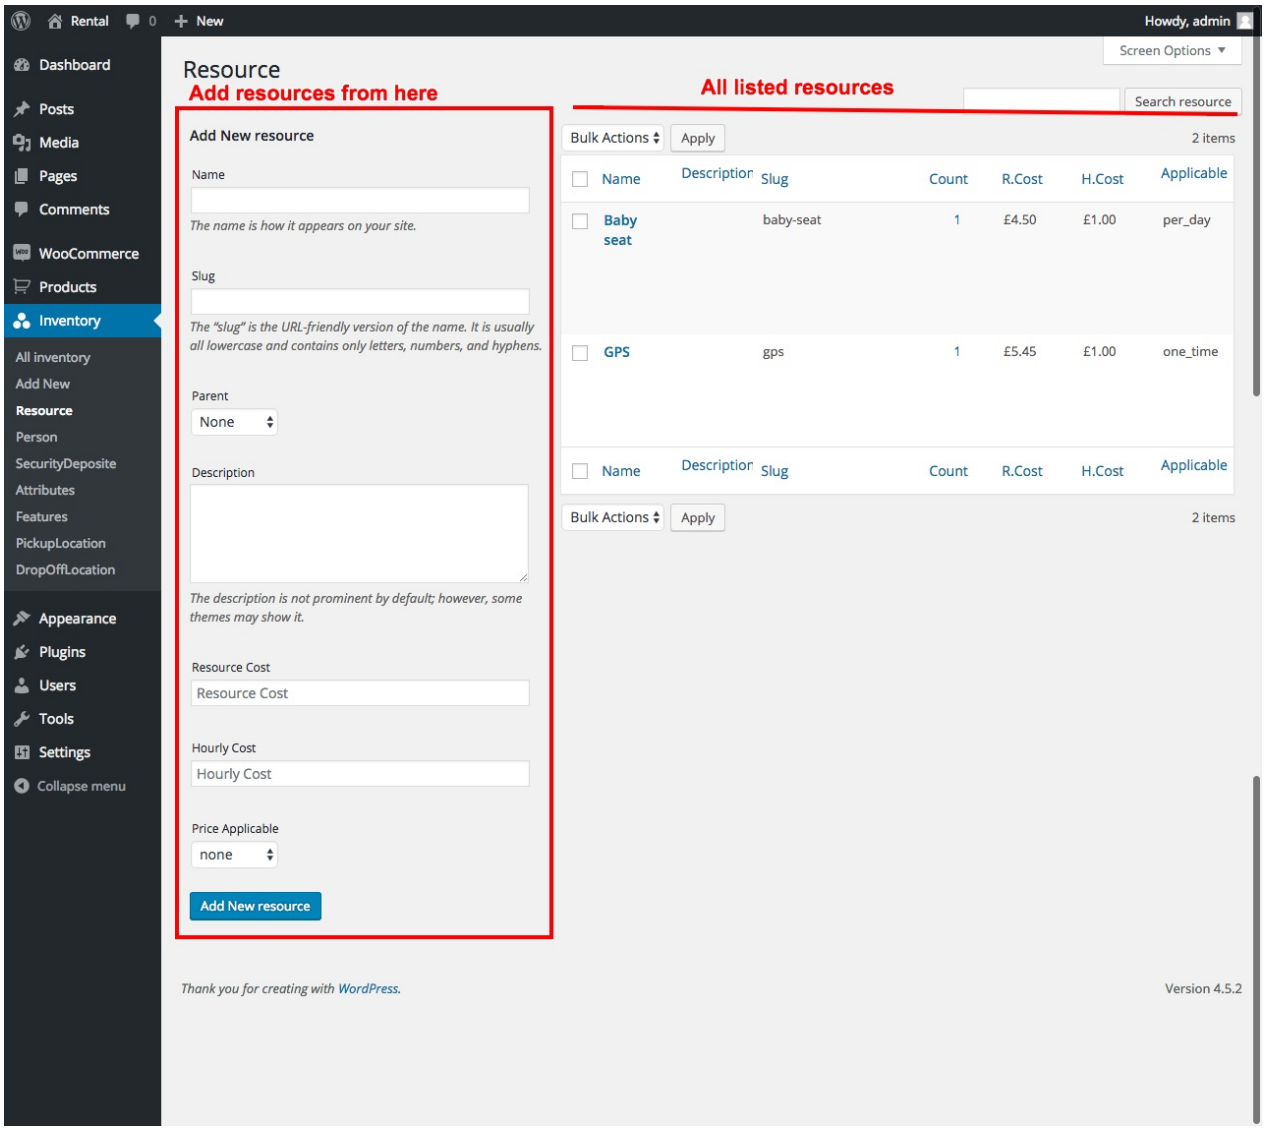
Resources (payable)

`Resource` is taxonomy of `Inventory` post type. You can find this here Dashboard->Inventory->Resources. You can add unlimited `payable resources` from here. You can set it either per-day or one-time basis. If you set per-day basis then it will allow you to set hourly price for this resource. If you book less than 1 day then the hourly resource cost will be applied. Check this screen-shot to get more idea about per-day resources cost. It also has drag-and-drop sorting facilities.

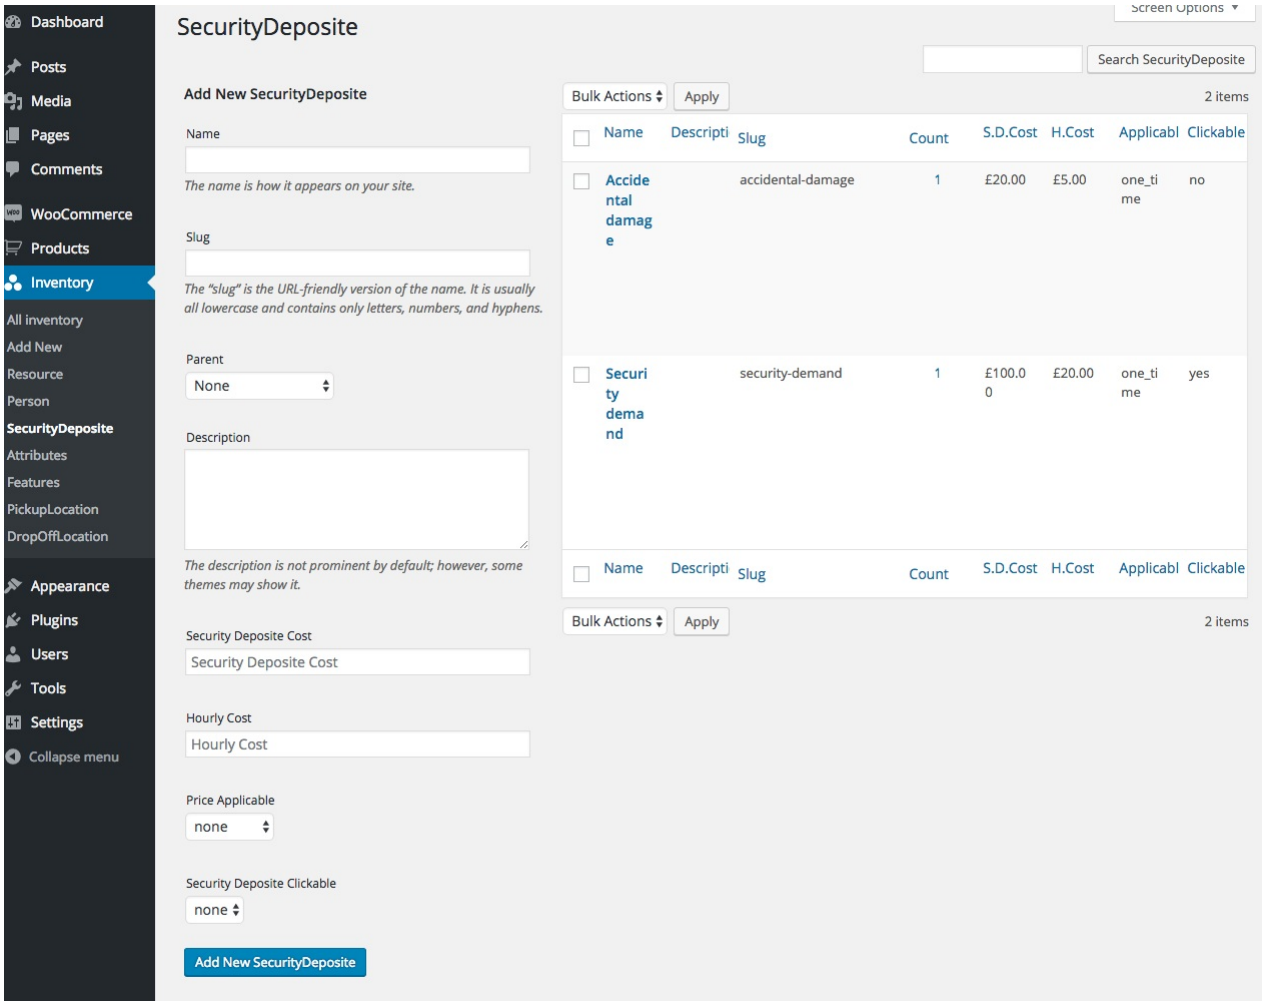
You can set `payable resources` like the following screen-shot.



Security Deposite

Deposit is taxonomy of Inventory post type. You can find this here Dashboard->Inventory->Deposit. You can add unlimited payable security deposit from here. You can set it either per-day or one-time basis. If you set per-day basis then it will allow you to set hourly price for this resource. If you book less than 1 day then the hourly resource cost will be applied. You can also set deposit as clickable or not-clickable. If you set deposit as clickable then the customers can check or unchecked during booking. If you set deposit as not-clickable then the customers don't find option to unchecked it, it must be included during booking. Check these screen-shots to get more idea about per-day and one-time deposit cost. It also has drag-and-drop sorting facilities.

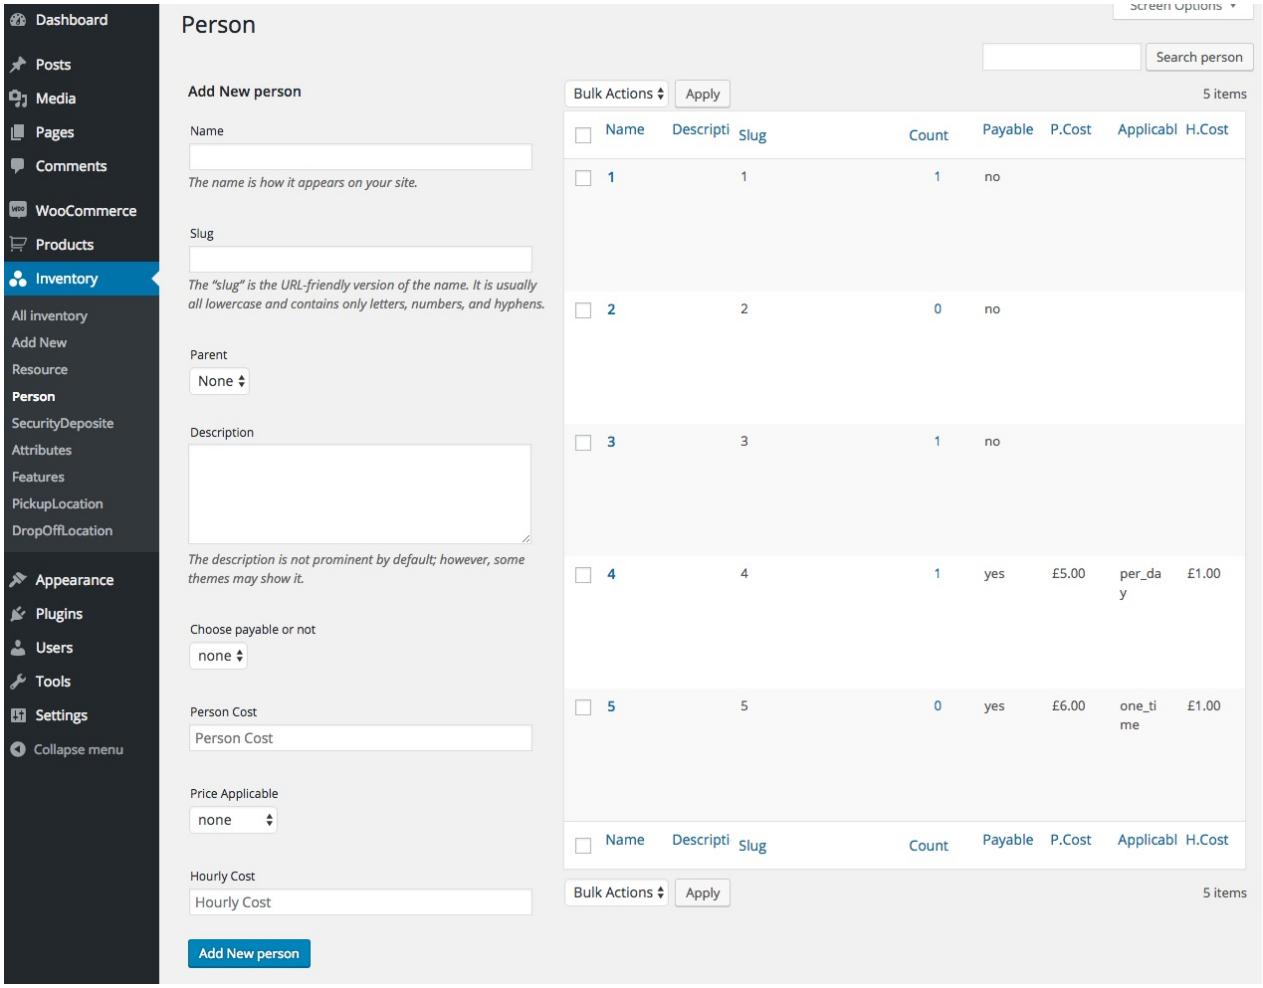
You can add security deposits like the following screen-shot.



Person(both payable and non-payable)

Persons is taxonomy of inventory post type. You can find this here Dashboard->Inventory->Persons.You can add unlimited `payable person` from here. You can set it either `per-day` or `one-time` basis. If you set `per-day` basis then it will allow you to set hourly price for this person. If you book less than 1 day then the hourly person cost will be applied. Check this screen-shot to get more idea about `per-day` person cost and `one-time` person cost. It also has drag-and-drop sorting facilities.

You can add both payable or non-payable person from here.



Locations (both pickup and drop-off)

Pickup Location and Drop-off location are taxonomies of inventory post type. You can find this here Dashboard->Inventory->Pickup Location and Dashboard->Inventory->Dropoff Location. You can add unlimited pickup and drop-off locations from here. You can also add pickup cost and drop-off cost also.

FYI : The name input field value will show in drop-down in product single page and description text-area field value will show in cart, checkout , order and email page.

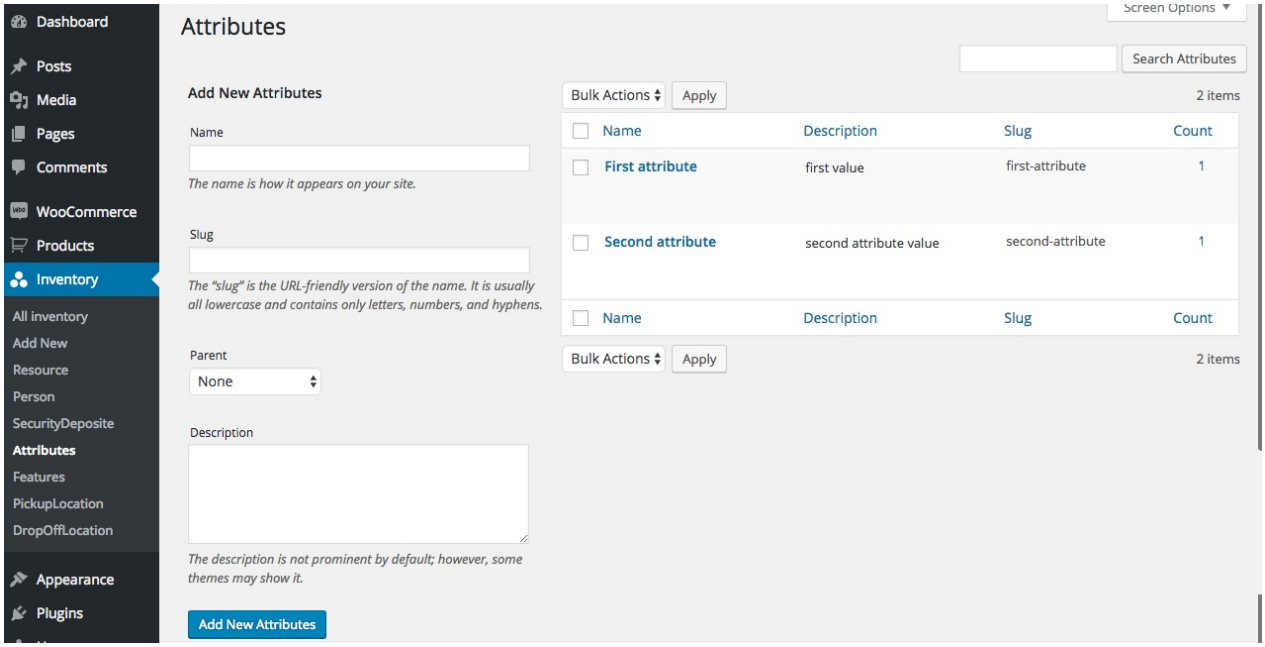
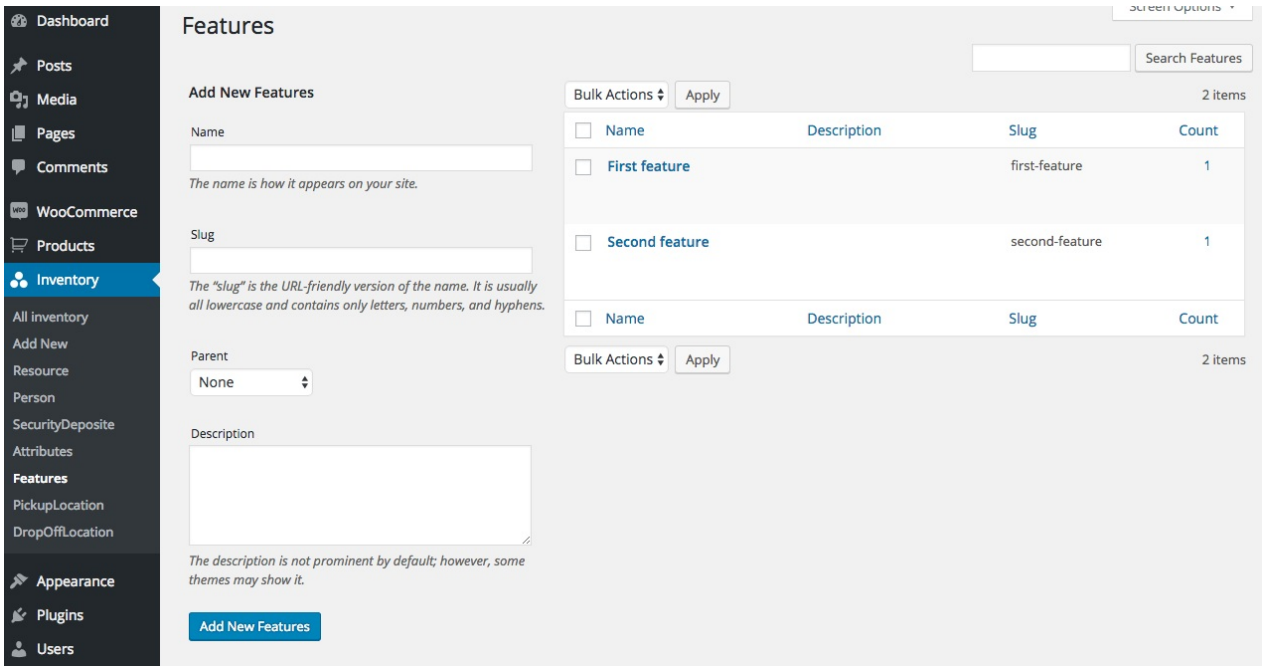
Attributes and Features (non-payable)

Attributes and Features both are taxonomies. You find these taxonomies from `Dashboard->Inventory->Attributes` and `Dashboard->Inventory->Features` link.

You can add `unlimited product attributes` from this general tab like the following screen-shots.It has drag-and-drop facilities to sort the attributes.



You also can add `unlimited product features` from here.



Product attributes and features will be showed in tab in single product page.

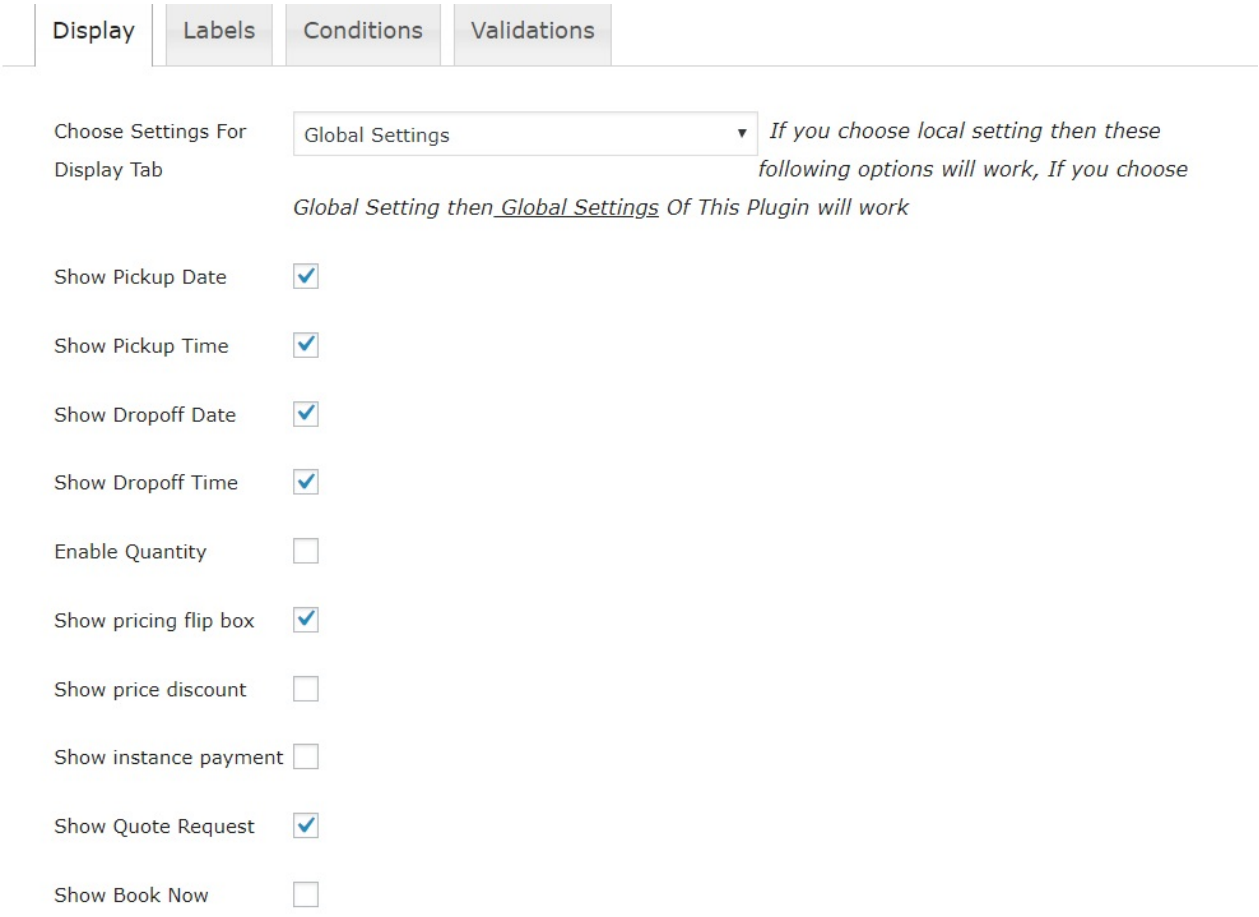
Product settings (Global)

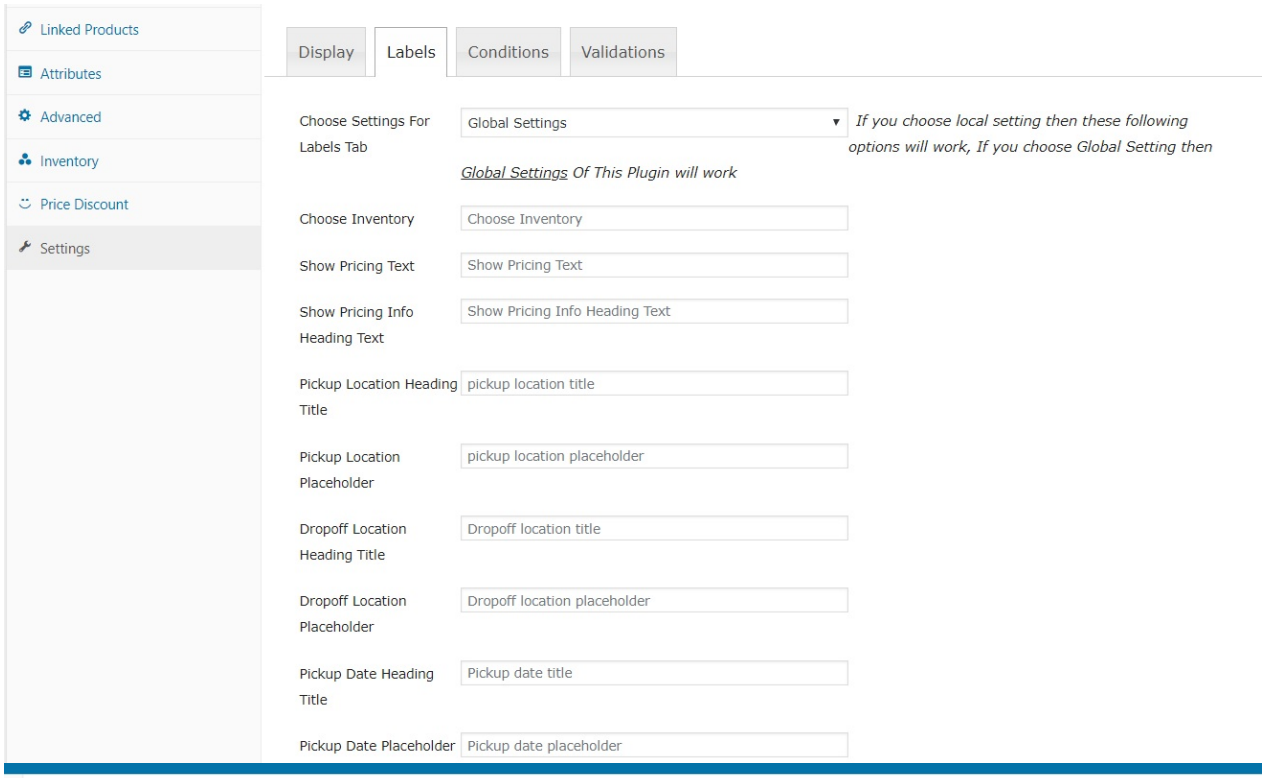
Global setting will be applied for all products if you set them once. It has less priority than local settings to show them in front-end. `You find the global settings from Dashabord->Woocommerce->Settings->RnB Settings Tab` .

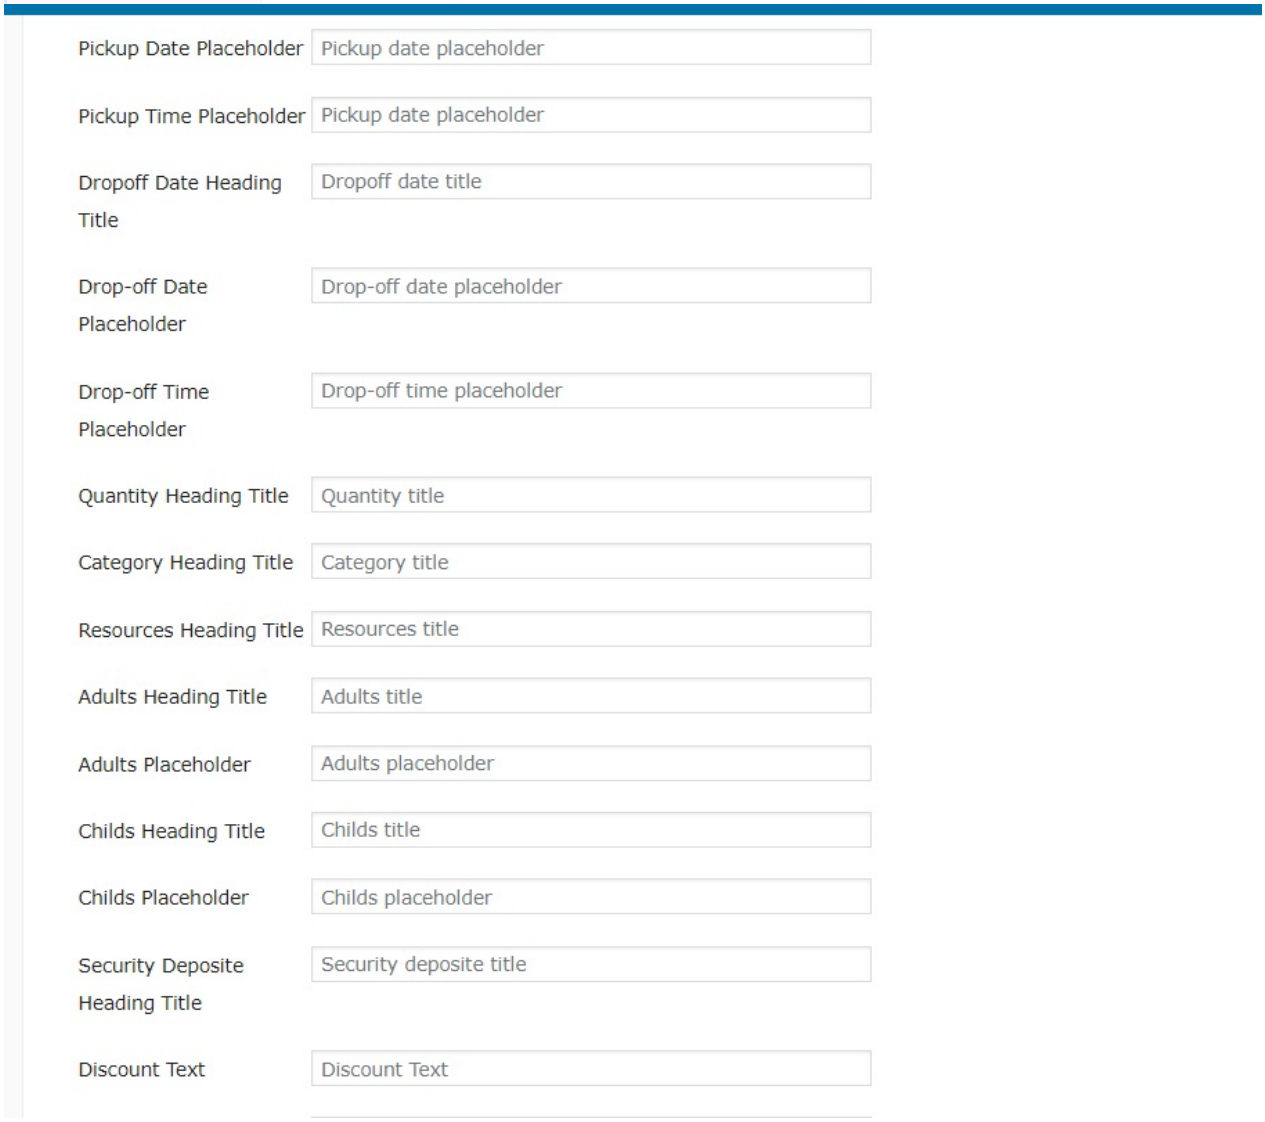
Product settings (Local)

You'll find these setting from **Display** setting tab of product back-end.

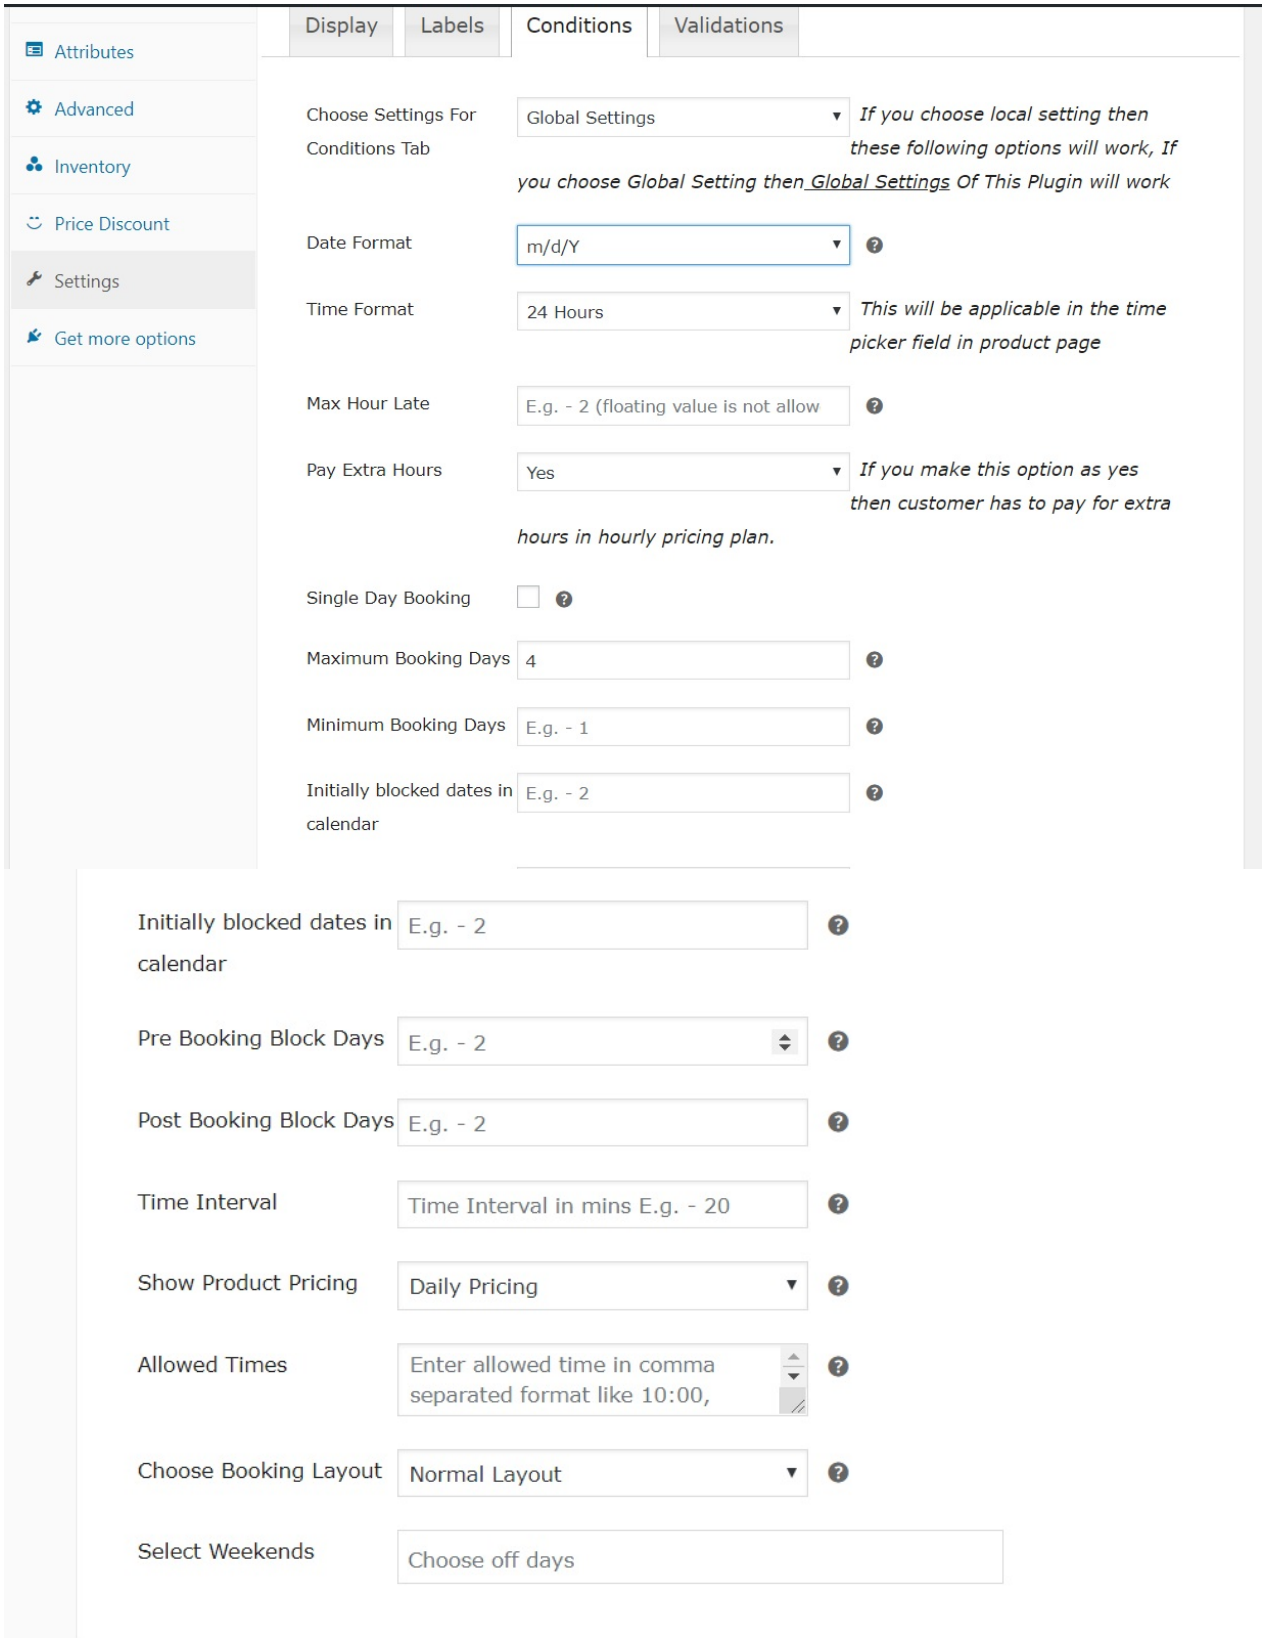


You'll find these setting from **Labels** setting tab of product back-end.





You'll find these setting from **Conditions** settings tab of product back-end.



Date Format Settings: This plugin allow you to choose there different date-format.

1. m/d/Y
2. d/m/Y
3. Y/m/d

Time Format: You can set your time format to either 24 hours or 12 hours. however by default the time format will be 24 hours.

Maximum time late: You can set max hour late during return time from here. If anyone cross this limit of time then another day will be count as his reservation days and price will be calculate depending on this.

Pay Extra Hours: This option gives you the option of charging your customers for the extra hours that they book rather than the full day. For example you have a daily price of $10 and general price of $2. If you set this option to yes then if a customer rents a product for 25 hours then he will be charged $12 i.e. daily price of $10 for 24 hours and then $2 for the extra hours. However for this you have to keep single day booking option unchecked.

Single Day booking: This option allows you to charge your clients for a single day price even if they book for less than 24 hours.

Maximum Booking Days: You can set booking maximum days from here.

Minimum Booking Days: You can set booking minimum days from here.

Initially Block days: This option of our plugin allows you to block dates of the calendar. If you set the value 2 then suppose toady is 24/4/2025 and user will see 24/4/2025 and 25/4/2025 unavailable to book.

Pre Booking block Days: If you set for example this option to 1 then one extra day before the rental period will be blocked. For example with pre booking block day is given as 1 a customer books the product from say 24/4/2025 to 26/4/2025. Then on the front end calendar the product will be blocked from 23/4/2025 to 26/4/2025

Post Booking Block Days: If you set for example this option to 1 then one extra day after the rental period will be blocked. For example with post booking block day is given as 1 a customer books the product from say 24/4/2025 to 26/4/2025. Then on the front end calendar the product will be blocked from 24/4/2025 to 27/4/2025

Time Interval: You can set your time interval for you calendar. However this will not work if allowed time is given.

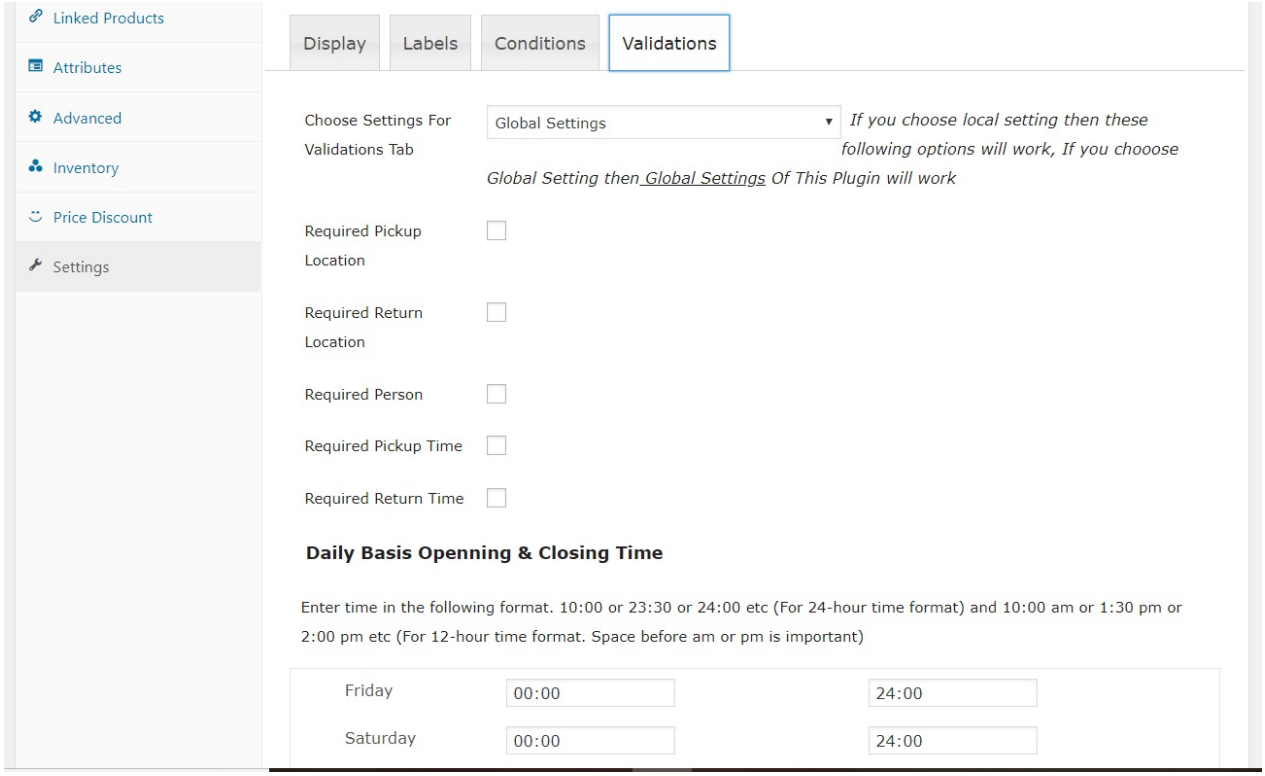
Show Product Pricing: You can select if you want to show the daily pricing of the product or the hourly pricing of the product via this feature.

Allowed times: You can set the allowed times which will show in the front end of the calendar.

Choose Booking Layout: This allows you to choose the layout of the product. we have normal layout or for uber like layout you can choose modal layout.

Select Weekend: If you select weekend from here these day will be unavailable for booking in front-end.

You'll find these setting from **Validations** settings tab of product back-end.



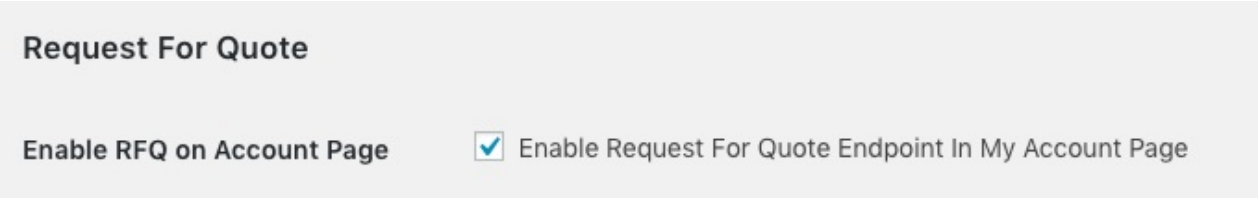
How does inventory and availability of a product work ?

Suppose you've 3 inventories of a product. Now if anyone book this product from a `02/07/2016 to 04/07/2016`, then this product also be available for the next customers in that dates. Because there are still 2 more inventories available in that particular dates. If the next two customers book this product in same dates, then for the fourth customers that dates will be unavailable.

Request for a Quote

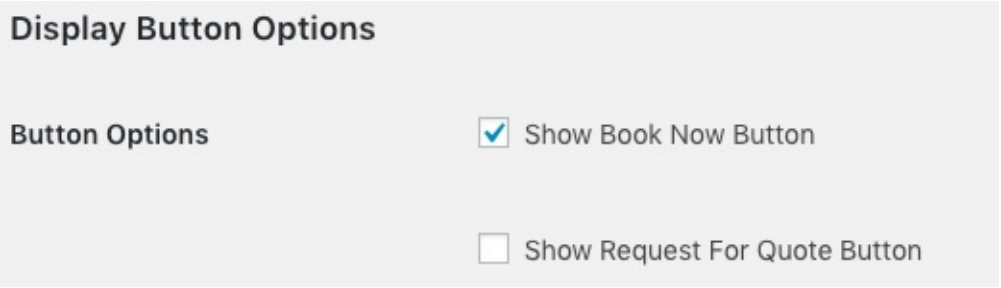
Watch Video Tutorialsfor how does our request for a quote functionality actually work.

Setting up the request for a quote is really easy. There are two settings available and those are global settings and local settings.



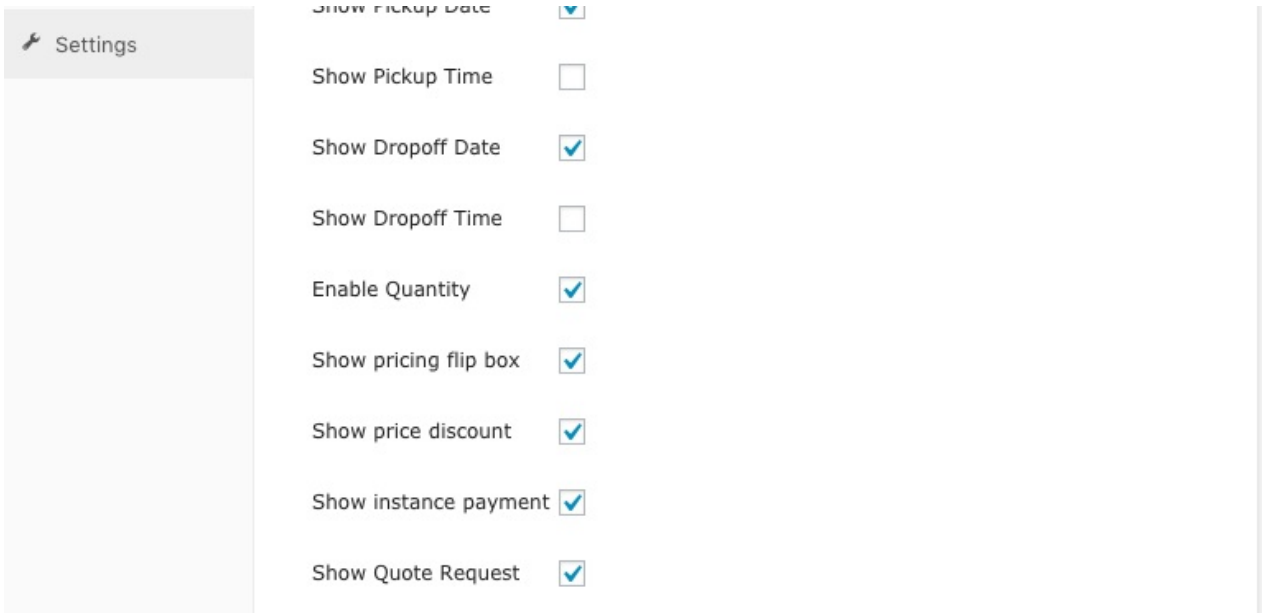
See the above screenshot. This will enable a menu in the customer's front-end 'my account panel'.

You can set global settings for showing all bookable products as a request for a quote option. You can find the global settings on**WooCommerce>RnB Settings>Display**



You can set this option for an individual product too. For this function, there is a setting to show up the request for a quote button.

In the product settings tab down below there is a checkbox**Show Quote Request,**check this box and it will show the button in the front-end.



Settings
Show Pickup Time
Show Dropoff Date
Show Dropoff Time
Enable Quantity
Show pricing flip box
Show price discount
Show instance payment
Show Quote Request

Complete Product Creation

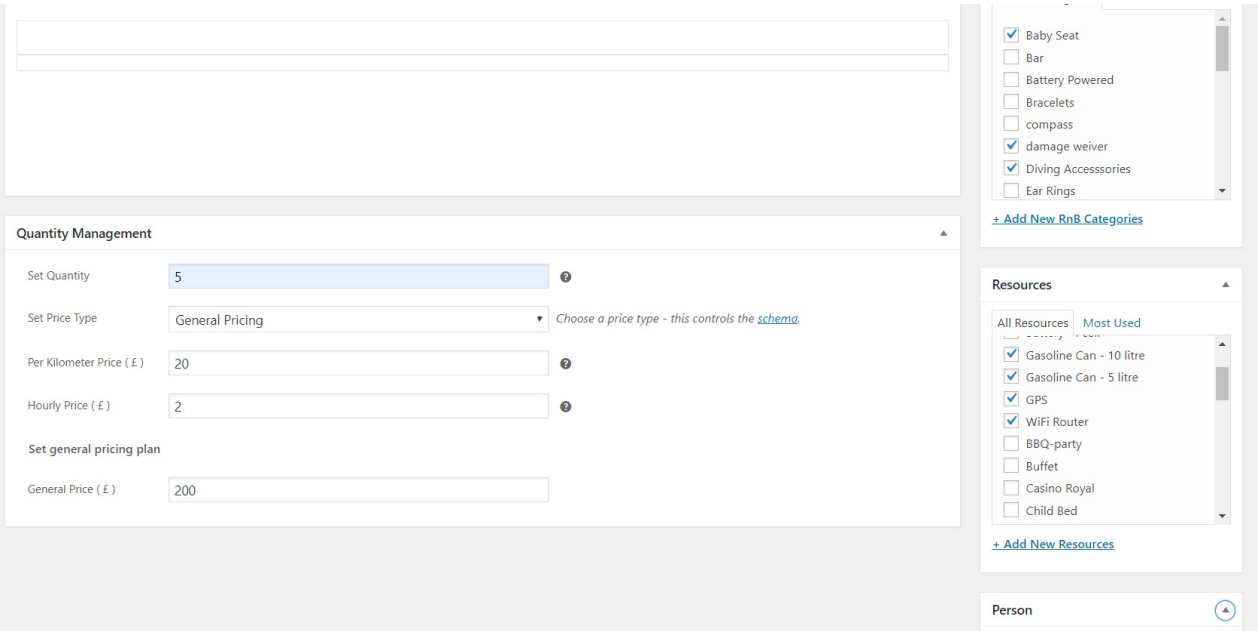
Now resources, persons, security deposit, locations, attributes, quantity, pricing and features are controlled by `Inventory tab` of product page.

Suppose you've 3 same cars of Audi. Now you don't need to create 3 individual product for these three cars. You just need to create one product, then from inventory tab attach the relevant inventory.

To successfully create a product you have to follow these two stages.

First Stage :

First create an inventory with the resources, persons, security deposit, locations, attributes, quantity, pricing and features



Second Stage :

Once you create the inventory with all the pricing, quantity , resource attributes etc. you will need to create a product and attach the inventory with the product.

Product short description

Google Calendar Integration on RnB Plugin

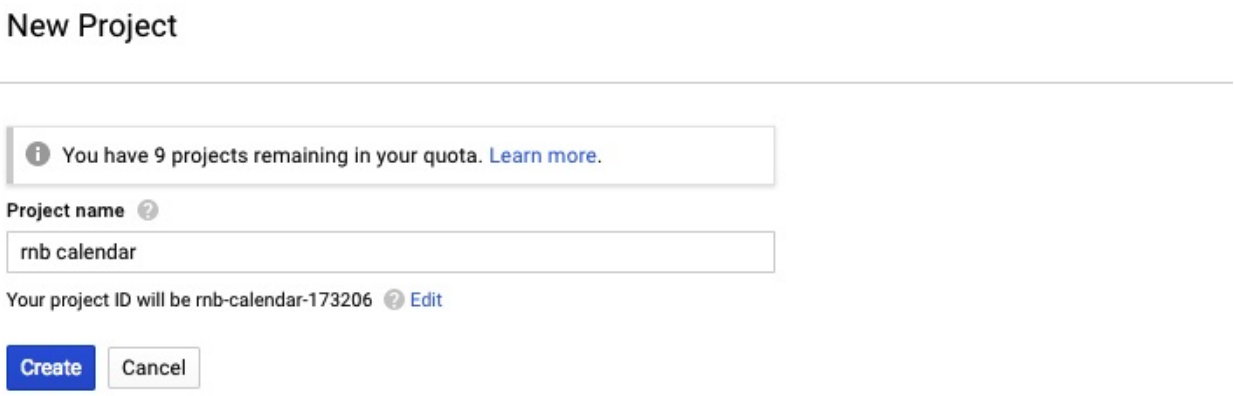
Step 1: Go To Google Developers Console

To use this integration, go to the Google Developers Console.

Step 2: Create Project On Google Calendar

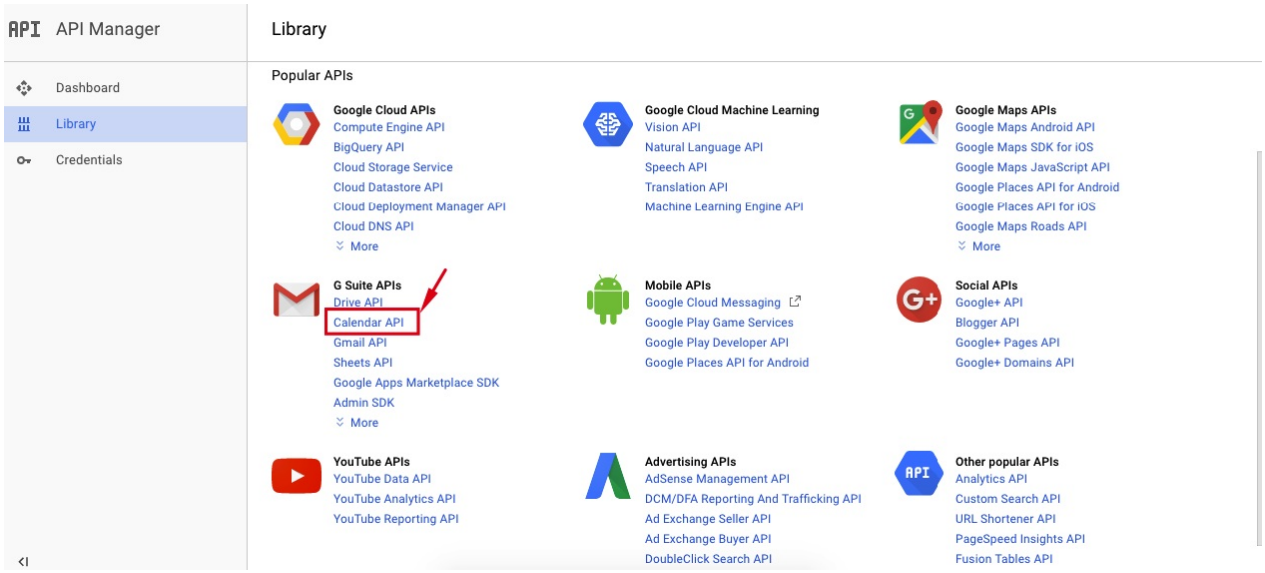
Go to: **Projects > Create Project** button. A popup should appear and ask for Project Name and Project ID. Enter your preferences.

For example



Step 3: Enable the Calendar API

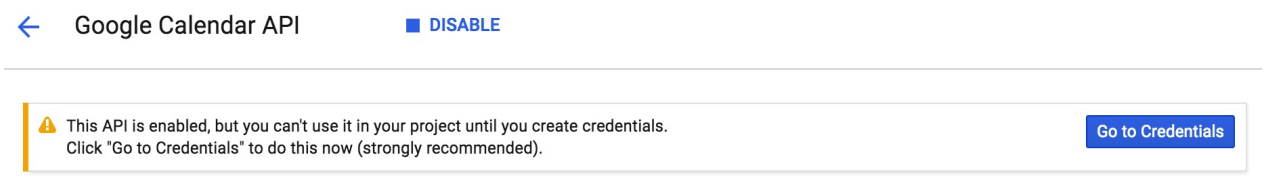
Once the project has been created, you are in the project folder. Go to the **Library** link on the left-hand menu. Choose the **Calendar API**.



Then click on**Enable**

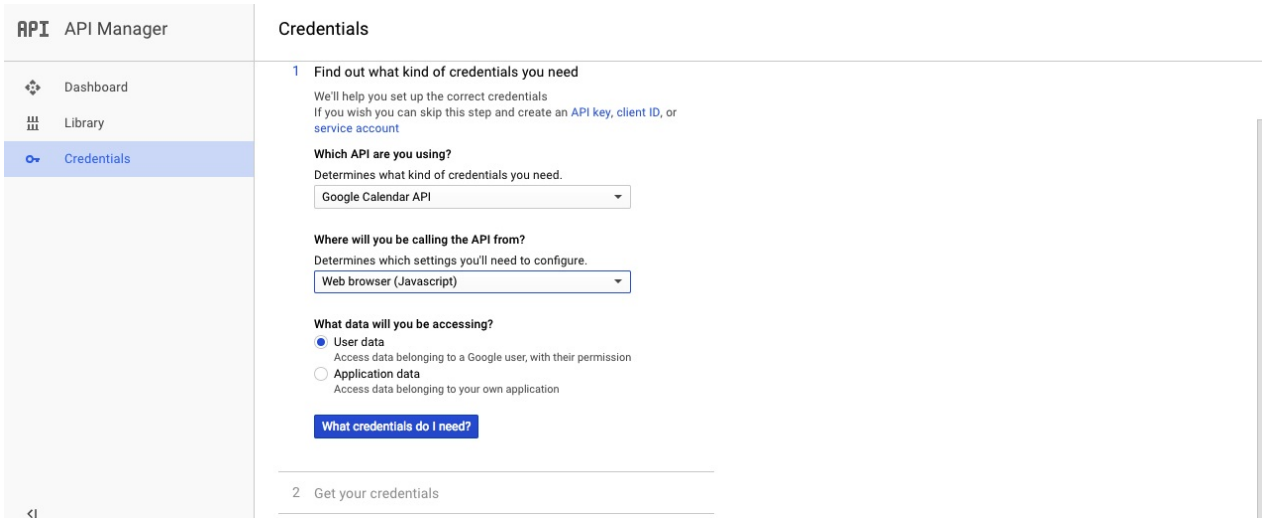
Step 4: Create Calendar Credentials

This will prompt you to first create credentials. Select **Go to Credentials**.

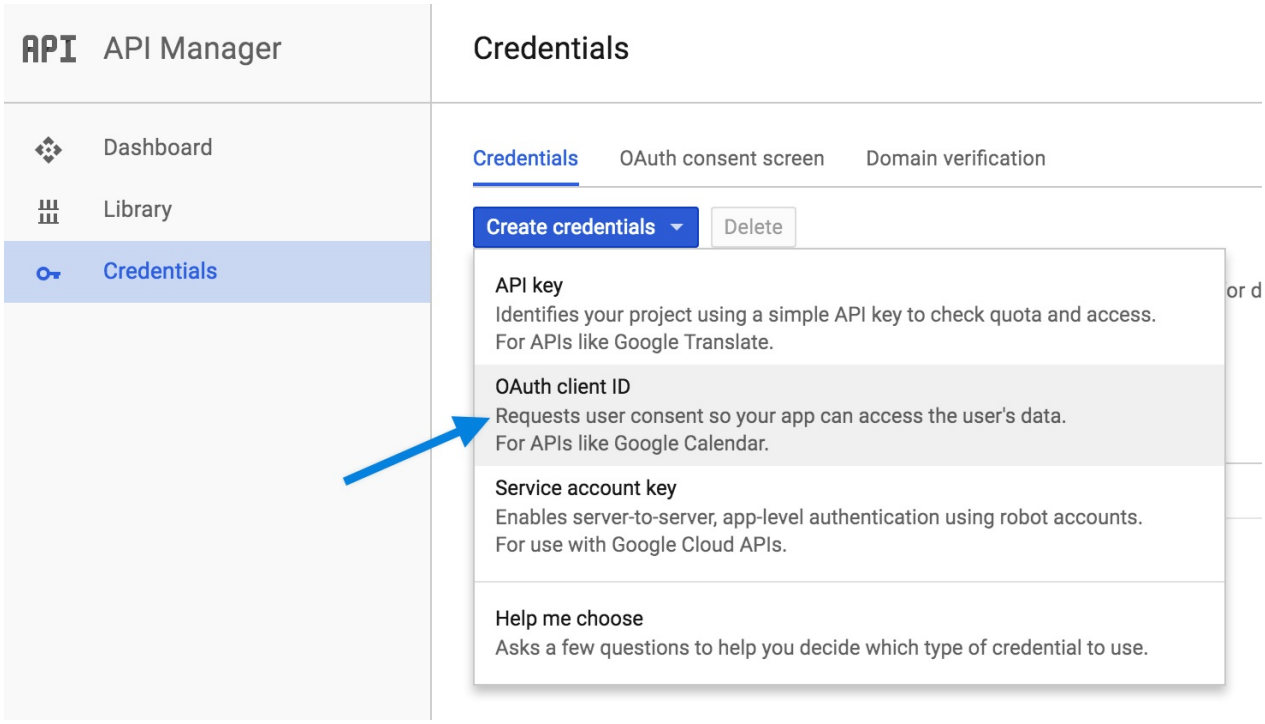


Choose

- **Web Browser (JavaScript)** as the source
- Select **User data** as the data type

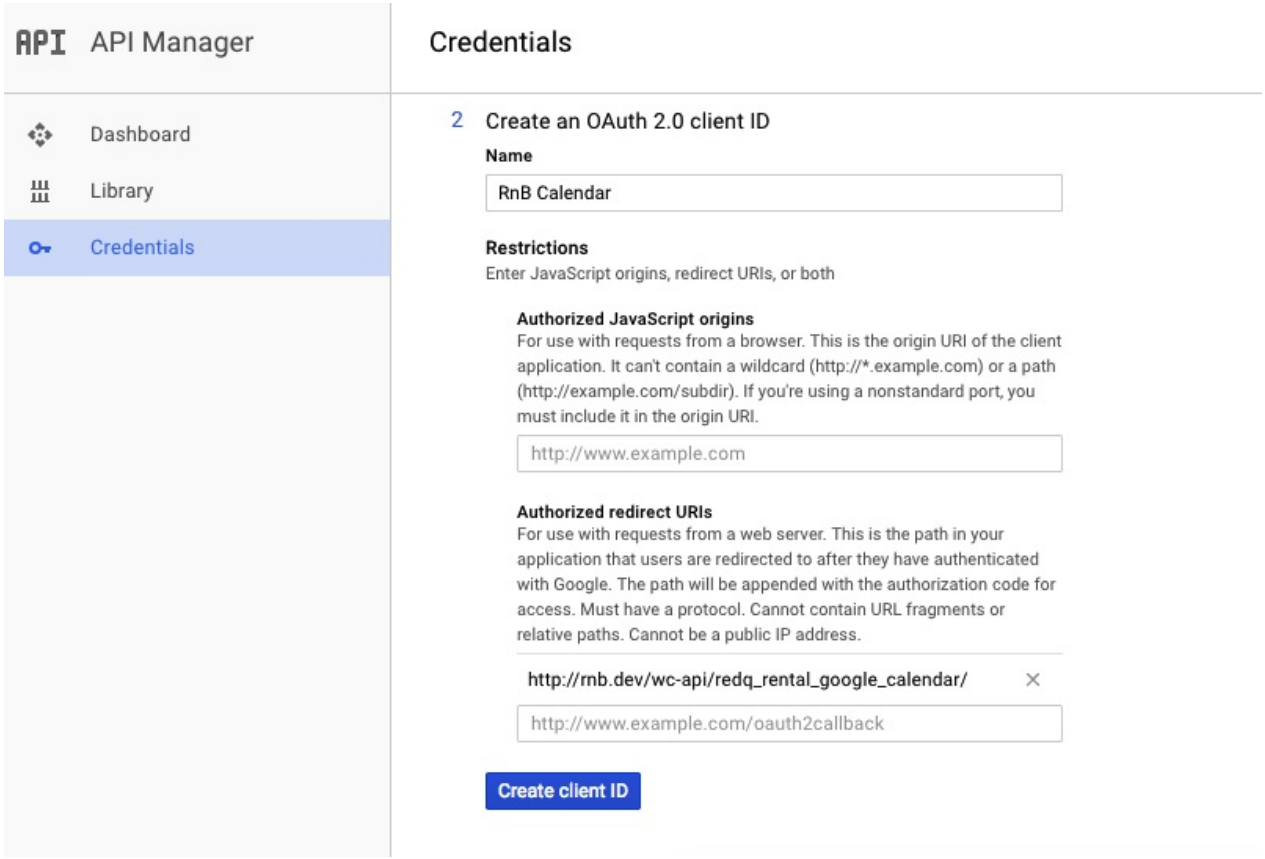


Alternatively, go directly to the **API Manager > Project > Credentials** page. There, select **Create credentials**.



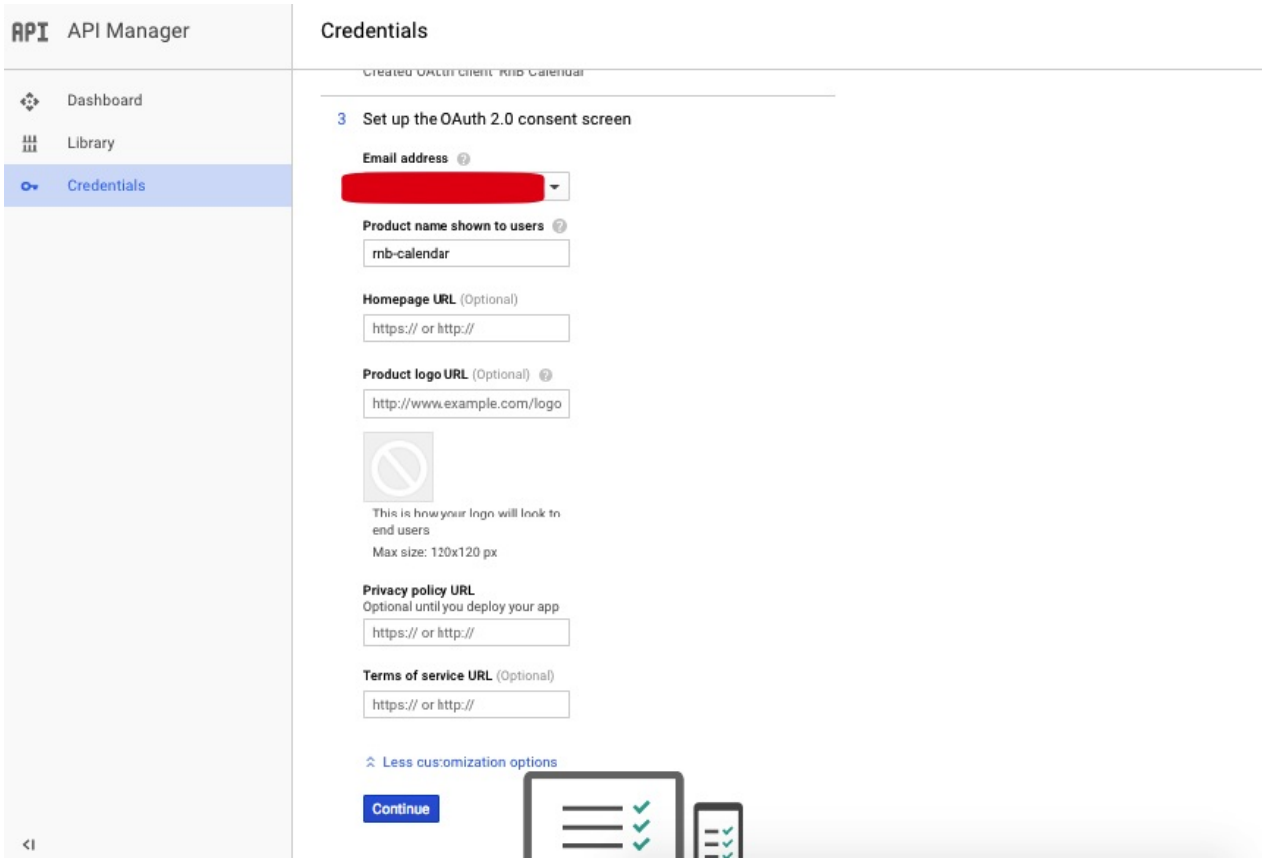
Step 5: Insert new Credentials

- Give your Credentials a **Name**
- Leave the **Authorized JavaScript origins** blank
- Enter `http://example.com/wc-api/red_rental_google_calendar/` as the **Authorized Redirect URI** with example.com being the URL of your web store



Step 6: Set up your Consent screen

- Your email address is already selected
- Enter a **Product name shown to users**
- You can also enter extra customization options



Step 7: Download Credentials

Once this is done, download the credentials. Open the `.json` file to access them. In the file, you'll find several things, but these two are needed for the Bookings integration:

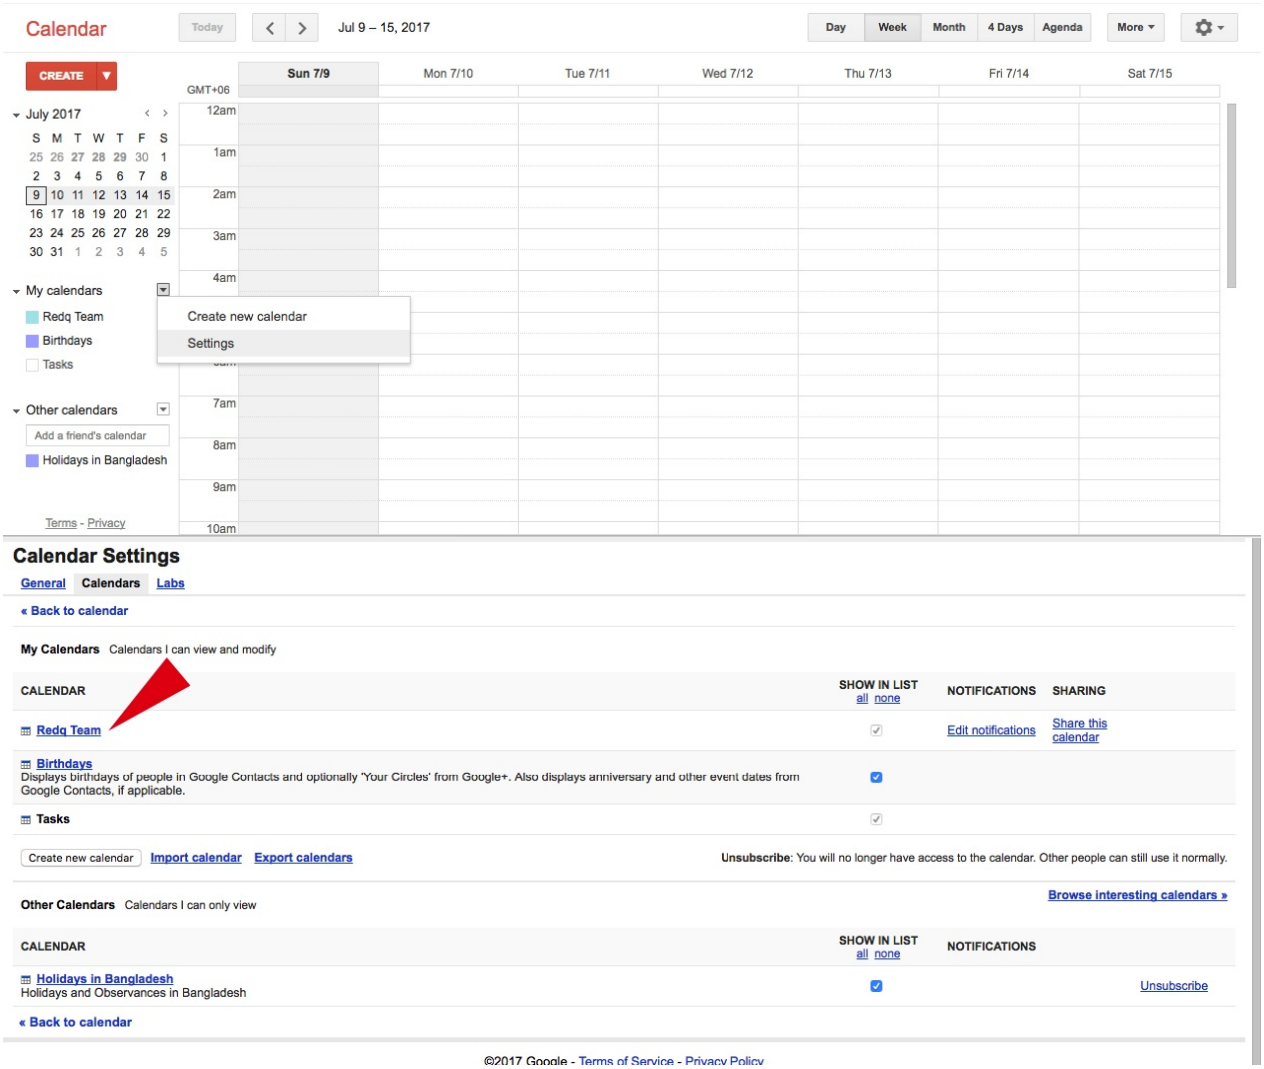
- `client_id`
- `client_secret`

You can also access these by going to the **API > Credentials** page after having created them. There click on the name of the credentials. You can copy the client ID and secret there.

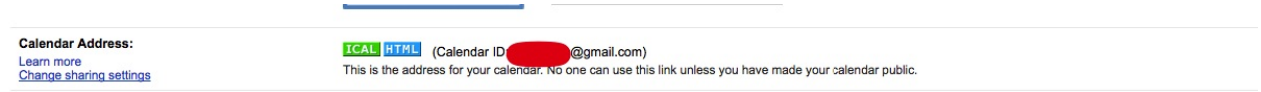
Enter these two in your store under **WooCommerce > Settings > Integration**.

Step 8: Get Calendar ID

Create the calendar you will use in Google Calendar, if you haven't already. Then navigate to My Calendars on the left, and select Calendar Settings.



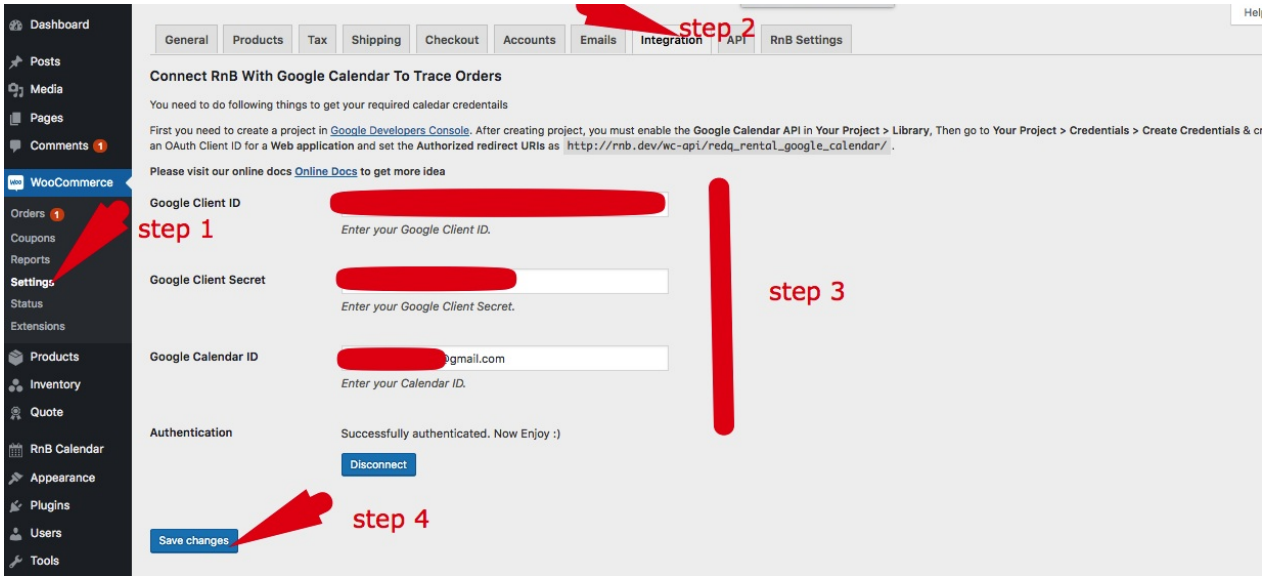
On this screen, there is a section called **Calendar Address**. Copy the **Calendar ID**.



Step 9: Integrate These Credentials into WooCommerce Settings Panel In Your Site

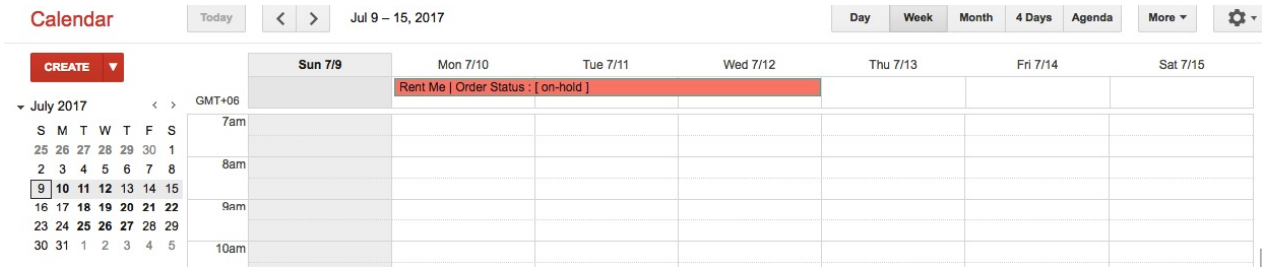
Go to: **WooCommerce > Settings > Integrations**, and enter the **Calendar ID.**

Finally, select **Save changes**.



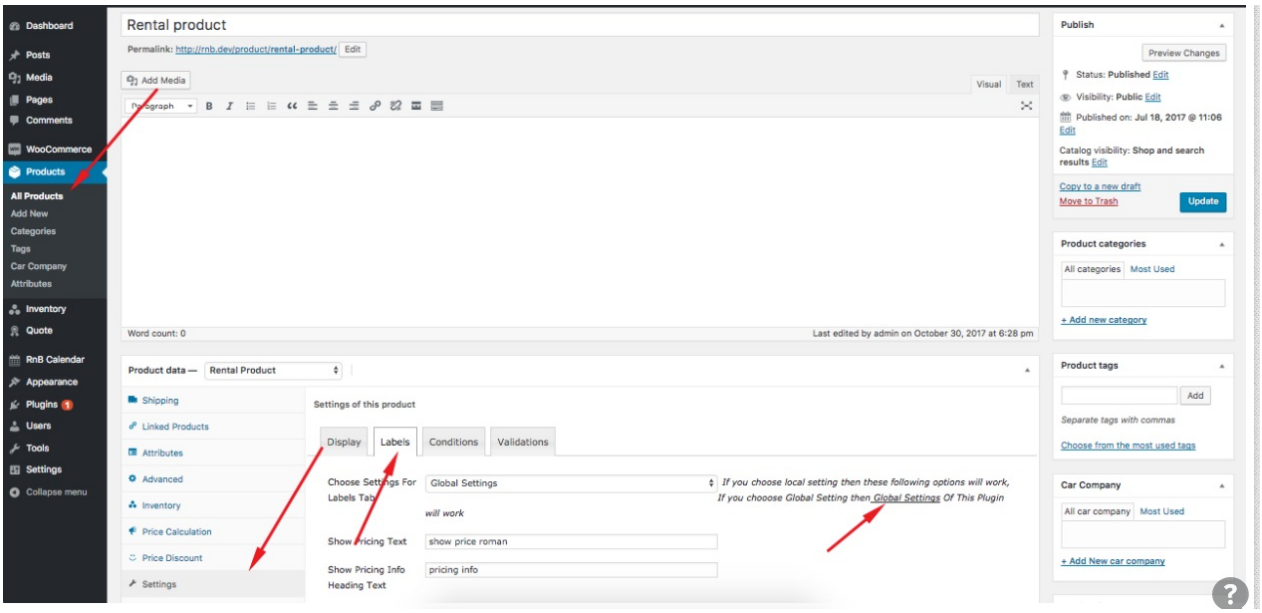
Once you've entered your credentials and saved your settings, you will be provided with the option to authorize your account and calendar with Google.

Now check your wooCommerce order into your google calendar.



Local Settings and global settings

Our plugin provides the options to change every text and placeholder from it's settings panel. It has two setting panel one is local settings which works individually for each product and another is global settings which works for all product once you set the global options for a product. You can check our screenshot regarding this.



Translation using .pot file

Suppose we want to translate in Dutch language.

Steps :

```
1. Download poedit software from http://poedit.net/

2. Make your wordpress installation with Dutch language.

3. Add language code in wp-config.php file . For Dutch it is defined as ('WPLANG','nl_
NL');

4. Create a .po file for Dutch language from redq-rental.pot(plugins->woocommerce-rent
al-and-bookings->languages) file with poedit software.

5. Save the .po file with Dutch language code. So the file name will be redq-rental-nl
_NL.po and put this file in plugins->woocommerce-rental-and-bookings->languages direct
ory. You will find your language code here http://wpcentral.io/internationalization/

6. Now your Translation complete.
```

1. **Open poedit software**
2. **Click Edit a translation link**
3. **Then open your .po file from the window**
4. **Then from select menu -> catalog -> update from pot file**
5. **Select the .pot file.Your .po file will be updated automatically according to your new .pot file.**
6. **Thank you for your patience :-)**

https://youtu.be/Jz8MY_K1P38

FAQ

How Does General Pricing Work ?

Admin can set general price from the back-end. It's just like default pricing type of woo-commerce. During booking, the price calculates depending on that price.

For example, suppose you set General price as 10$.

Now from front-end if anyone book three days the price calculate as (10$ + 10$ + 10$) = 30$

How Does Daily Pricing Work ?

Admin can set daily price from the back-end. During booking, the price calculates depending on the respective day's price.

For example, suppose you set Saturday price as 10$, Sunday price as 15$, Monday price as 15$ from the back-end.

Now from front-end if anyone book three days as Saturday , Sunday and monday the price calculate as (10$ + 15$ + 15$) = 40$

Does this plugin support Inventory ?

Yes, inventory management feature is available now from v2.0. To get more information about it , you can check our online documentation from our item details page. or simply follow the link: Inventory Management

How Does Monthly Pricing Work ?

Admin can set monthly basis price from the back-end. During booking, the price calculates depending on the respective month's price.

For example, suppose you set January month price as 10$, February price as 15$, March price as 15$ from the back-end.

Now from front-end if anyone book three days in January , three days in February then the total price calculated as (310$ + 315$) = 75$

How Does Day Ranges Pricing Work ?

Admin can set unlimited day ranges pricing from the back-end. During booking, the price calculates depending on the respective day range's price.

Suppose you set min day 1 and max days 5 and it’s cost as 60$, another day ranges pricing is min days 6 and max days 10 and it’s cost 50$.

You can set price as `per-day` or `fixed` basis.

If you set price applicable as `per day` then the calculation will be like this: Now if any one book 3 days from front-end then the total price will be = 60 * 3 $ = 180$.

Now if any one book 8 days from front-end then the total price will be = 50 * 8 $ = 400$

If you set price applicable as `fixed` then the calculation will be like this:

Now if any one book 3 days from front-end then the total price will be = 60$ = 60$.

Now if any one book 8 days from front-end then the total price will be = 50$ = 50$

How Can I Set Redirect to Cart Page After Clicking Book Now Button ?

There is an option in WooCommerce setting to redirect to cart page after booking. please enable this option then when you click book now button it will redirect you to cart page. You will find this option from here

`Dashboard->WooCommerce->settings`

How do i disable/enable pickup date and time ?

You find this option in the settings tab of product backend.

How do i disable/enable drop-off date and time ?

You find this option in the settings tab of product backend. You also find the global setting for this options from

`Dashboard->woo-commerce->settings->rnb settings tab.`

How do i change pickup or drop-off date title ?

You find this option in the settings tab of product backend. You also find the global setting for this options from `Dashboard->WooCommerce->settings->rnb settings tab.`

How do i change pickup or drop-off location title ?

You find this option in the settings tab of product backend. You also find the global setting for this options from

```
Dashboard->WooCommerce->settings->rnb settings tab.
```

How do i change resource or security deposit or additional person title

You find this option in the settings tab of product backend. You also find the global setting for this options from

```
Dashboard->woo-commerce->settings->rnb settings tab.
```

Is your plugin work smoothly with others WooCommerce default product types ?

Yes . it is fully compatible with WooCommerce default product types .

How can i check admin functionality of this plugin ?

URL
username : demo
password : demo

For this , you have to login with the above credentials . Then you have to go Dashboard->products->add new , then from product type drop-down select the rental product. Then you can see all admin functionality of this plugin.

How to make product single page like our demo ?

We used salient theme to represent our demo and we customize their product single page to implement our own design concept. It’s is not any related part of our plugin. This design will not match with salient’s product single page. We customize code with premium support. If you want this design you can take our premium support and please contact through our support system

How Does Hourly Pricing work ?

If you total rental or booking day less than 1 day then the booking cost will be calculated as hourly price rate. You can set hourly price from product backend. It works as following.

Suppose you set per hour price as 10$ from product backend . Now if your total rental day becomes less than 1 day like 2 hours then the booking cost will be 10*2 = 20 $.

If your total booking or rental days becomes more than 1 day then the hourly price will not work.

Back-end RnB Calendar is broken.

It is a problem with the database and the orders that caused the calendar not showing, Please emptied the orders database, then it will be solved

Book now button text don’t show in front-end ?

For book now text issue, We’ve provided an option in the setting tab of product backend to set this text . Please check this and set the text. Hope you’re problem will be solved.

Add to cart button text is not showing ! How to solve it ?

Go to product back-end . From “setting tab” select “physical appearance tab”. From here you can set the button text.

Location data not showing in cart, checkout and email ? How to fix it ?

Please check our online docs Location Hope it will help you.

Where I'll find or download the latest version of plugin ?

You can download it from your download tab. or you can see the download link like this http://prntscr.com/d7ucltin plugin page https://codecanyon.net/item/rnb-woocommerce-rental-booking-system/14835145. For here you can download the latest version.

Does it support same product multiple item booking at a same time?

Sorry, this feature isn't currently available. But it will coming very soon.

Does it support WooCommerce Variable-Product variations added inside the Rental-Product?

Sorry, this procedure isn't possible.

How can i make an option non-clickable that mean this option is required?

For this you have to create a term from Dashboard->Inventory->Deposit taxonomy. So go to this taxonomy and set `Security Deposite Clickable` value as no.

Which payment gateways are supported by this plugin?

For payment gateway : our plugins is standard wooCommerce extension. It supports all payment gateways which are supported by wooCommerce. You can check all supported payment gateway from here https://woocommerce.com/product-category/woocommerce-extensions/payment-gateways/.

By default , it provides PayPal, Direct bank transfer and Cash on Delivery payment method.

Does this plugin work on multisite ?

Yes, Our plugin works fine on multisite. For here you can read one of our customer review regarding this

```
It took some time to find out but now I can confirm that this plugin works on multisite. The trick is that you can’t activate WooCommerce or this plugin on network level but you must do it on sub-site level …
```

How to delete date from admin panel?

Every product create child products depending on it inventory item. You will find these child post in Dashboard->Inventory directory. You can delete the date from the child product of main product.

Please follow the article https://redq.io/blog/woocommerce-booking-plugin/ for step by step discussion of the settings of our plugin.

In the RnB settings portion, WooCommerce Rental product has 4 options.

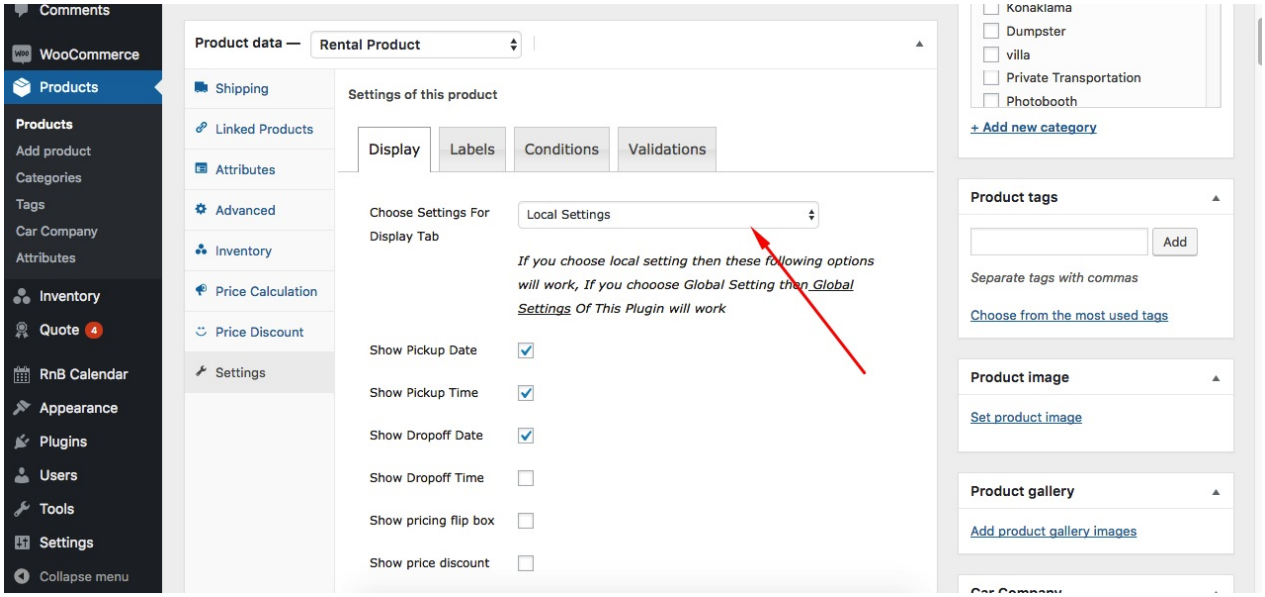
- Display
- Labels
- Conditions
- Validations

All the options have 2 different settings.

- Local Settings
- Global Settings

Local Settings

Local settings mean that the settings will work for that individual product or that specific options only. To set up these settings, please go to settings->Any of the tabs(Display/label/Condition) and select local settings from the drop-down.



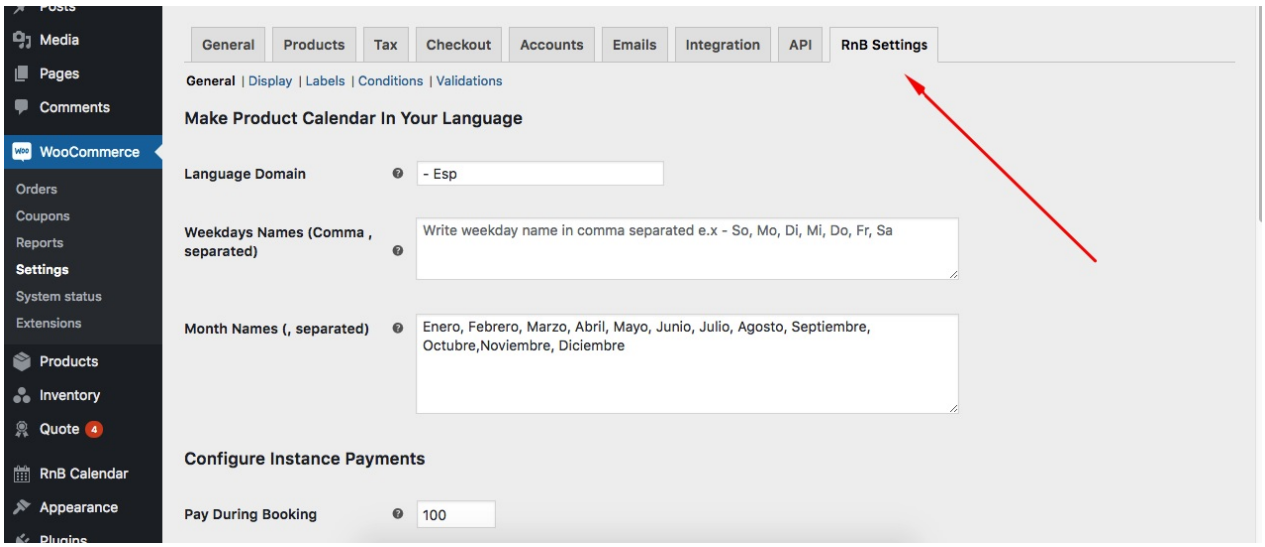
As these settings is named as local settings, it will work for this product only.

Global Settings

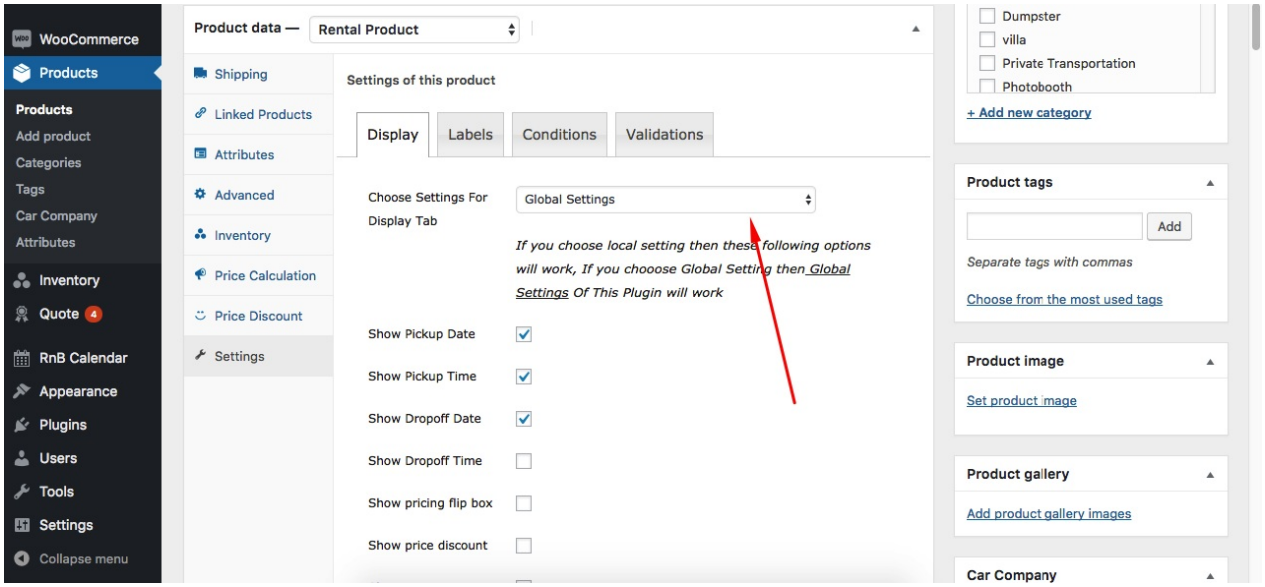
Global settings mean that the settings will work globally or for each and product. To add global settings, you need to follow two steps:

In the first step, please go to WooCommerce->settings->Go to RnB settings and then set your desired settings by going those tabs

- General
- Display
- Labels
- Conditions
- Validations



In the second step,please go to settings->Any of the tabs(Display/label/Condition) and select global settings from the drop-down.



N.B: If you need global settings for all products and local settings for two or three products, Then set the Global settings for all of the products and then go to that two or three product and set the settings to local settings.

Configure RNB for WPML

Before checking these step please make sure you make product and inventory post type translatable from WPML multilingual content setup window.

Translated documents options
Document status
Draft
Same as the original document
Choose if translations should be published when received. Note: If Publish is selected, the translation will only be published if the original document is published when the translation is received.
Page URL
Auto-generate from title (default)
Translate (this will include the slug in the translation and not create it automatically from the title)
Copy from original language if translation language uses encoded URLs
Save

Custom posts slug translation options

☐ Translate custom posts slugs (via WPML String Translation).

Save

Translation pickup mode

How should the site receive completed translations from Translation Service?

◉ Translation Service will deliver translations automatically using XML-RPC

○ The site will fetch translations manually

Save

XLIFF file options

XLIFF version

Choose default format for XLIFF file: XLIFF 1.2

New lines character

How new lines characters in XLIFF files should be handled?

◉ All new lines should be replaced by HTML element <br class="xliff-newline" />. Use this option if translation tool used by translator does not support new lines characters (for example Virtaal software)

○ Do nothing. If you will select this, all new line characters will stay untouched.

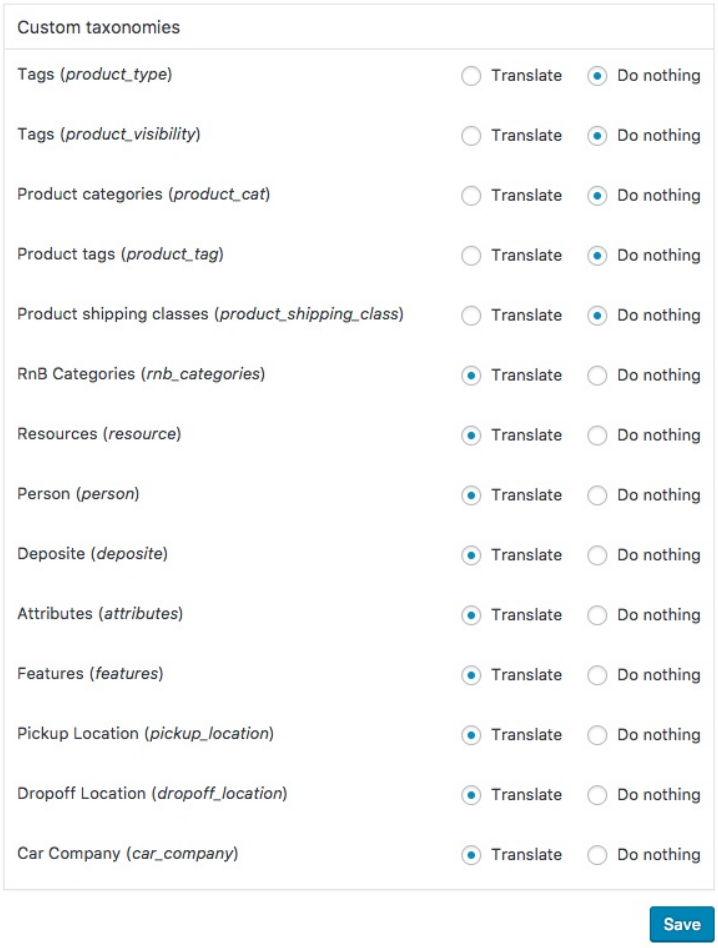
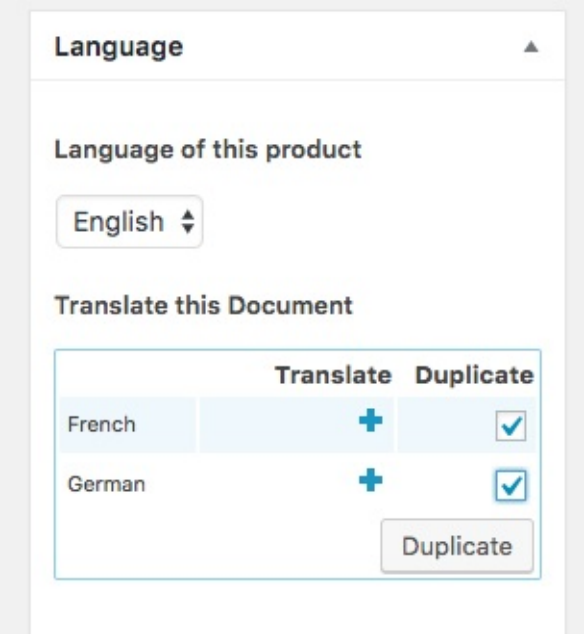
Custom taxonomies

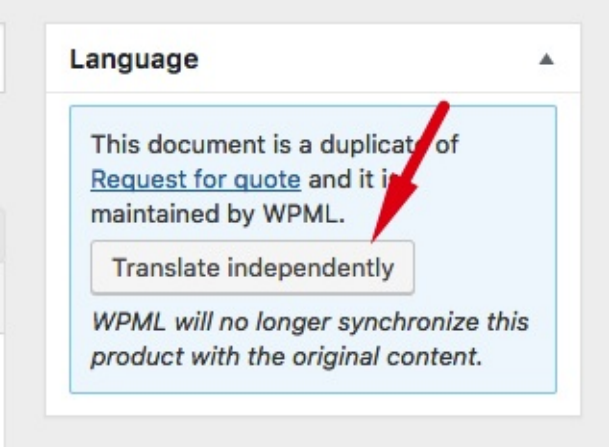


To translate an existing product do the following steps

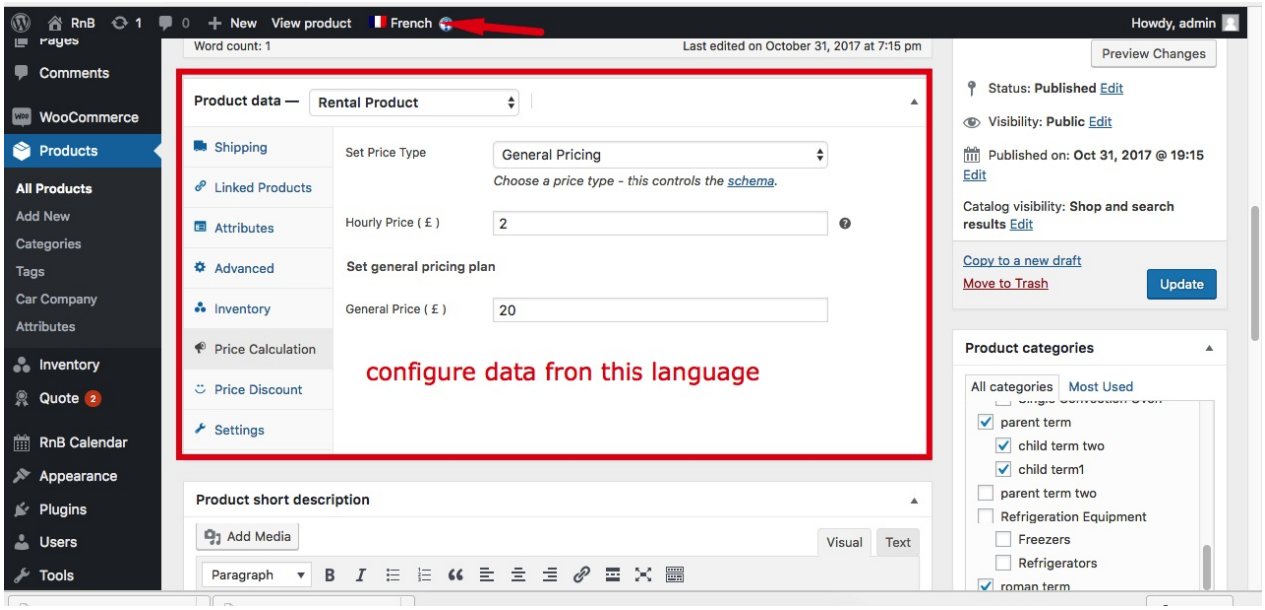
- Open the product and duplicate it for all languages.



- Go to duplicate product first and them make it independent translation by clicking independent translation button.



- From here configure your rental attributes such as price , dates, and others options.



- Click update button twice to delete all previously created inventories and adjust with new inventory child posts.
- Done for this language.
- If you have more than one language then repeat 1, 2, 3, 4, 5 for all languages.
- Now return to the original product and click update button
- All Done
